Appendix B - Abernethy Road Costs	56
Appendix C - Orton Road Costs	58
Appendix D - Kardan Boulevard Costs	60
Appendix E - San Simeon Boulevard Cost	62
Appendix F - Doley Road Costs.....	64
Appendix G - Warrington Road Costs.....	66
Appendix H - Byford Central District Open Space (Soccer Field) Costs	68
Appendix I - West Byford Primary School/ Kalimna District Open Space	
(Senior AFL Oval) Costs	70
Appendix J - Byford Primary School/ The Glades District Open Space	
(Senior AFL Oval) Costs	72
Appendix K - Land Acquisitions for District Open Space, Public Open Space.....	
& Drainage Costs	74
Appendix L - Water Quality Management Costs	76
Appendix M - Development Contribution Plan Administrative Costs.....	78
Appendix N - Historical Administration Costs: Structure Plan and	
DCP Establishment.....	80

1 Introduction

1.1 Background

The Byford development area is located within the Shire of Serpentine Jarrahdale, and is generally bound by Thomas Road to the north, the existing Byford Townsite to the east, South Western Highway to the southeast, Cardup Siding Road to the south and Hopkinson Road to the west.

The Byford District Structure Plan (DSP) has been prepared to guide the preparation of more detailed local structure plans (LSPs) facilitating subdivision and development within the Byford area. Infrastructure and land for public purposes will be required to cater for this development.

A copy of the Byford DSP Map is contained in Figure 1.

1.2 Purpose of Development Contribution Plan

Due to the existence of multiple landholdings within the Byford DSP area, the Shire has decided to prepare a development contribution plan (DCP) to share the cost of infrastructure, land and other items required to support the development of the area.

1.3 Purpose of Development Contribution Plan Report

This report has been prepared to set out in detail:

- The infrastructure, land and other items for which development contributions are to be collected.
- How land values are calculated and the valuation methodology applied.
- The cost estimates of infrastructure and other items.
- The periodic review of the cost estimates.
- The cost contribution rates applicable to individual precincts within the Byford development contribution area.
- The methodology to calculate development contributions applicable to landowners/developers and the operational aspects of the methodology.
- Principles for the priority and timing of infrastructure provision and land acquisition.
- The period of operation of the DCP.
- Various other operational matters.
- Examples of how development contributions will be calculated.

1.4 Status

This DCP Report has been prepared pursuant to Clause 10.3.10 of the Shire of Serpentine Jarrahdale Town Planning Scheme No. 2 (TPS 2).

The report should be read in conjunction with Clause 10.3 and Appendix 16A of TPS 2 and any relevant precinct-level LSP.

This DCP Report does not form part of TPS 2.

1.5 Principles

This DCP Report has been prepared pursuant to the guiding principles for development contribution plans, as set out in Clause 10.3.6 of TPS 2 and detailed below:

(a) Need and the nexus

The need for the infrastructure included in the plan must be clearly demonstrated (need) and the connection between the development and the demand created should be clearly established (nexus).

(b) Transparency

Both the method for calculating the development contribution and the manner in which it is applied should be clear, transparent and simple to understand and administer.

(c) Equity

Development contributions should be levied from all developments within a development contribution area, based on their relative contribution to need.

(d) Certainty

All development contributions should be clearly identified and methods of accounting for cost adjustments determined at the commencement of a development.

(e) Efficiency

Development contributions should be justified on a whole of life capital cost basis consistent with maintaining financial discipline on service providers by precluding over recovery of costs

(f) Consistency

Development contributions should be applied uniformly across a development contribution area and the methodology for applying contributions should be consistent.

(g) Right of consultation and review

Owners have the right to be consulted on the manner in which development contributions are determined. They also have the opportunity to seek a review by an independent third party if they believe the calculation of the costs of the contributions is not reasonable.

(h) Accountable

There must be accountability in the manner in which development contributions are determined and expended.

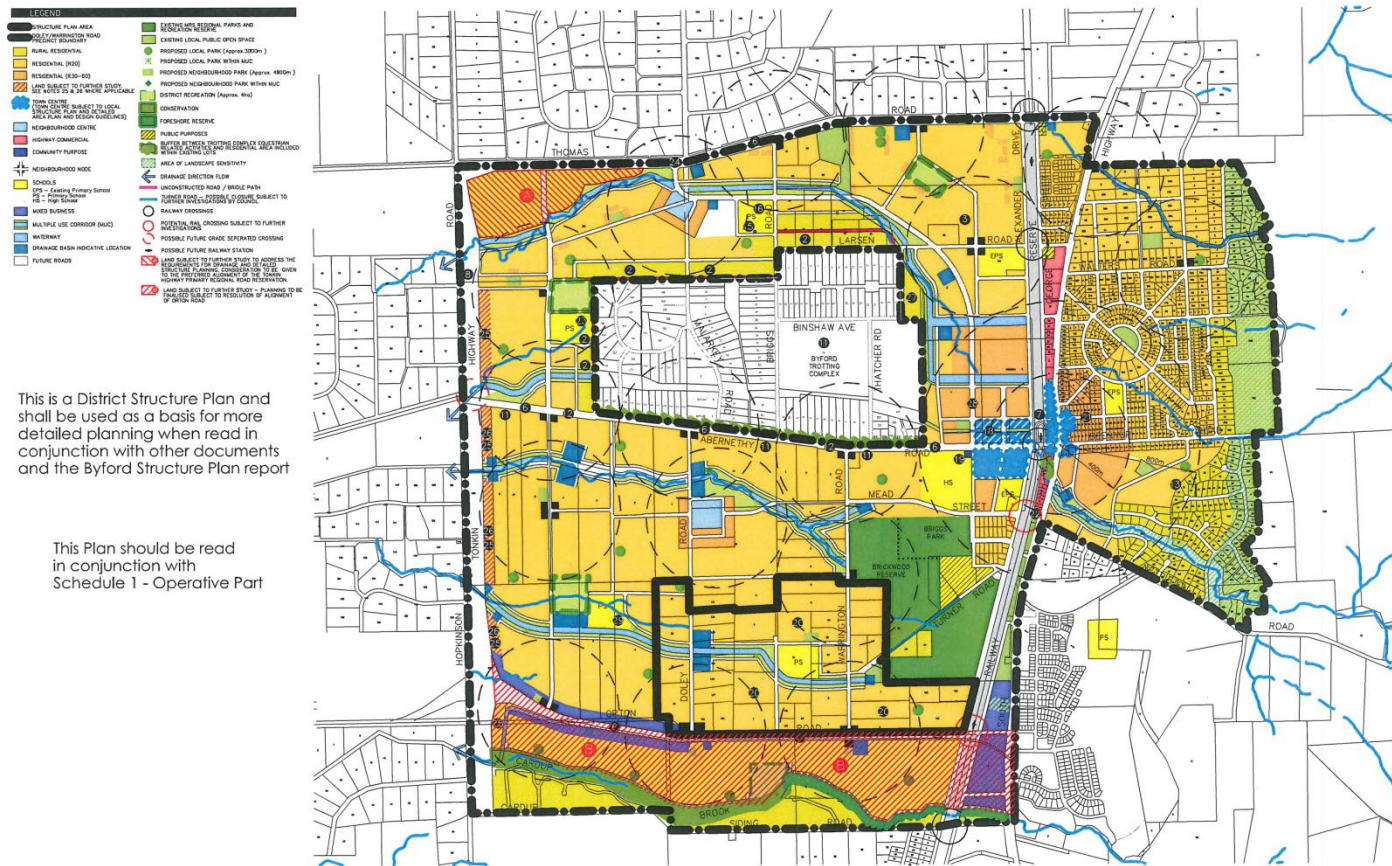

1.6 Area of Operation

The DCP Report applies to the Byford development contribution area (DCA) (see Figure 2), as indicated on the TPS 2 Scheme Maps and detailed within Part 10 of TPS 2.

1.7 Strategic Basis

The Byford DSP guides the preparation of LSPs, which in turn facilitate the eventual subdivision and development of land within Byford. This subdivision and development necessitates the provision of new and upgraded infrastructure, land for public open space and drainage purposes. In this context, the Byford DSP forms the strategic basis for the DCP Report.

Figure 1 – Byford District Structure Plan Map

This is a District Structure Plan and shall be used as a basis for more detailed planning when read in conjunction with other documents and the Byford Structure Plan report

This Plan should be read in conjunction with Schedule 1 - Operative Part

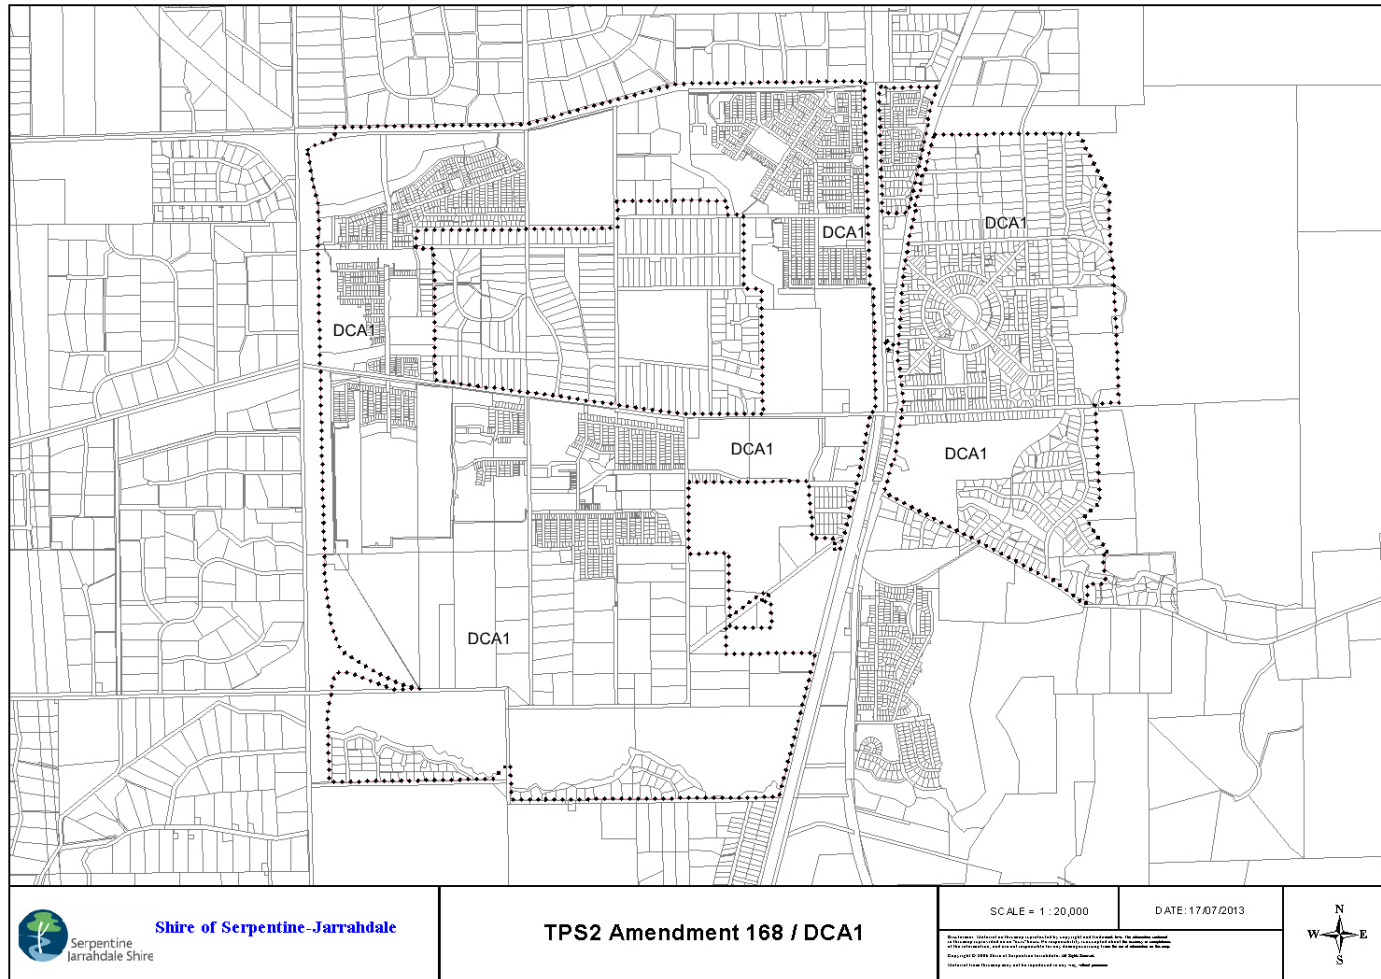

FIGURE 1: BYFORD DISTRICT STRUCTURE PLAN

DATE 10.08.2010
 DWG NO 004

REV B
 SCALE NTS

Figure 2 – Byford Development Contribution Area

2 Infrastructure, Land and Other Items

This section of the DCP Report identifies the infrastructure, land and other items for which development contributions will be collected in Byford. These items include:

- District distributor and local roads playing a district function;
- Land for public open space and drainage;
- Land for district open space and drainage;
- Water monitoring costs; and
- Administration costs.

2.1 Land Value

Many of these items include a land component. To determine the total cost of the items, an estimate of land value therefore needs to be identified. This rate for the purpose of calculating the value of land for public open space, drainage and infrastructure in June 2013, is \$475,000 per hectare. This estimate is based on valuation advice for an indicative R20 zoned 5 hectare unimproved lot within the Byford DSP area.

Pursuant to Clause 10.3.11 of TPS 2, the cost estimate land value will be reviewed at least annually.

For the purposes of TPS 2 s.10.3 and Appendix 16A and this DCP Report, one englobo land value will apply to the entire Byford development contribution area, irrespective of precinct or structure plan classification, for the purpose of establishing the cost estimate allowance for land.

The net land value is to be determined in accordance with the definition of "value" in TPS 2 s.10.3.12 and having general regard to the International Valuation Standards Committee's definition of market value as adopted by the Australian Property Institute. To account for the direct transfer of land, the fair market value should be discounted by standard marketing costs including fees, commissions and advertising costs and by the prevailing DCP contribution liability which otherwise would have applied to the land.

2.2 Roads

The upgrading, construction and land acquisition of the following roads is included within the DCP:

- Thomas Road;
- Abernethy Road;
- Orton Road New;
- Kardan Boulevard;
- San Simeon Boulevard;
- Doley Road; and

- Warrington Road.

Figure 3 provides a graphical representation of the general extent to which the roads will be upgraded and/or constructed through the DCP.

Figure 3 – Road to be upgraded and/or constructed through DCA1 (including traffic control devices)

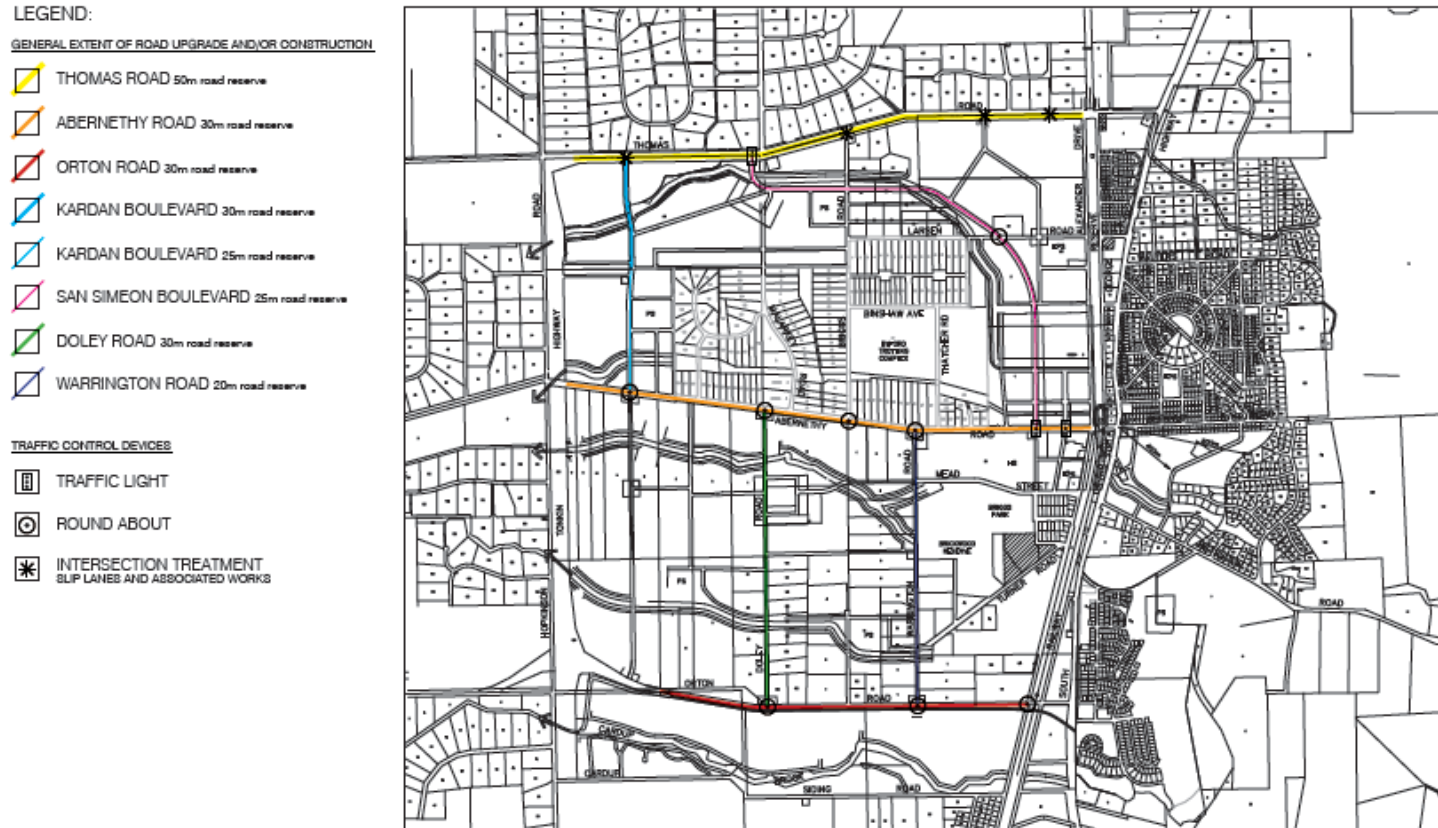

FIGURE 3: ROADS TO BE UPGRADED AND/OR CONSTRUCTED THROUGH THE DEVELOPMENT CONTRIBUTION ARRANGEMENT (AND TRAFFIC CONTROL DEVICES)

DATE 07.11.2013 REV c
 DWG NO 001 SCALE NTS

2.2.1 Thomas Road – District Distributor

Thomas Road borders a significant portion of the Byford DSP area to the north. Under the Metropolitan Region Scheme (MRS), the road is reserved as an Other Regional Road and is identified as a district distributor. The portion of Thomas Road abutting the Byford DSP is under control of the Shire.

The road currently exists, but will require changes in width, alignment and configuration to support development envisaged under the DSP.

The width of the Thomas Road reserve will be 50m.

The upgrade of Thomas Road will occur between the Tonkin Highway Metropolitan Region Scheme (MRS) Primary Regional Road Reserve and the railway reserve to the east. The detailed design of Thomas Road is currently being undertaken.

In accordance with State Planning Policy No. 3.6 – Development Contributions for Infrastructure (SPP 3.6), the following items are included within the Development Contribution Plan (DCP) for Thomas Road:

- Land required to achieve a 50 metre wide road reserve;
- Earthworks for the unconstructed carriageway;
- The construction and upgrade of one carriageway;
- Associated drainage works including water sensitive urban design measures;
- Traffic control devices including the following intersection treatments:
 - (a) Kardan Boulevard – construction of a channelised intersection, slip lanes and associated works;
 - (b) San Simeon Boulevard – full cost of signalisation;
 - (c) Plaistowe Boulevard – construction of channelised intersection slip lanes and associated works; and,
 - (d) Briggs Road – construction of channelised slip lanes and associated works.
- Shared paths;
- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total cost for Thomas Road is estimated at \$12,857,446 including land costs of \$586,625. A detailed breakdown of the costs is provided in Appendix A. A cost offset of \$8,005,800 has been estimated as a contribution from MRWA. It is recognised this figure is subject to change.

The following items are not included in the DCP for Thomas Road:

- Modifications to the current railway crossing configuration, as this may change in the future when detailed planning is undertaken by the Public Transport Authority for the future electrification of the railway line to Byford;
- Any upgrades to Thomas Road east of the railway crossing up to the dual carriageway near South Western Highway; and

- Any intersection treatment with Tonkin Highway. Tonkin Highway is a Primary Regional Road under the MRS and is a responsibility of Main Roads.

2.2.2 Abernethy Road – Local Road

Abernethy Road is located centrally within the Byford DSP area, providing an east-west connection and linking in with the proposed expansion of the Byford Town Centre. Abernethy Road is a Shire controlled road and is not reserved under the MRS. The existing state of Abernethy Road is rural in nature, with a narrow single carriageway allowing for one lane in either direction. The road is not proposed to provide a direct connection to the future extension of Tonkin Highway and will ultimately become a cul-de-sac at this point.

The width of Abernethy Road will generally be 30m.

The upgrade of Abernethy Road will occur between the Tonkin Highway MRS Primary Regional Road reserve and the railway crossing to the east. The portion of Abernethy Road adjacent to the Byford Trotting Complex will have half the cost of road widening, construction and upgrade borne by the DCP. The portion of Abernethy Road between Kardan Road and the cul-de-sac at Tonkin Highway will be retained as a single carriageway.

In accordance with SPP 3.6, the following items are included in the DCP for Abernethy Road:

- Land required to achieve a road reserve up to 30 metres in width;
- Earthworks for the whole road reserve;
- Complete road construction based on a single lane split carriageway with central median;
- Associated drainage works including water sensitive urban design measures;
- Traffic control devices including the following intersection treatments:
 - (a) San Simeon Boulevard – full cost of signalisation;
 - (b) Kardan Boulevard – full cost of roundabout;
 - (c) Doley Road – full cost of roundabout;
 - (d) Briggs Road – full cost of roundabout; and,
 - (e) Warrington Road – full cost of roundabout.
- Shared paths;
- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total DCP cost for Abernethy Road, given the Shire's decision to allocate proportionate costs against the future development of the Byford Trotting Complex for that section of Abernethy Road fronted by the trotting complex, is estimated at \$12,914,765 including land cost of \$1,258,750. A detailed breakdown of the costs is provided in Appendix B. A cost offset of \$725,250 has been received as a contribution from MRWA.

The following items are not included in the DCP for Abernethy Road:

- Minor intersections treatments into Abernethy Road from the adjoining subdivisional road network. These will be subject to a standard truncation requirement;
- In accordance with normal subdivision cost apportionment, half the cost share associated with the portion of road adjacent to the Byford Trotting Complex is excluded from the DCP as it is the responsibility of future development within the Trotting Complex. The excluded 50% cost share includes the land for widening, earthworks, drainage, construction and associated works.
- Modifications to the current railway crossing configuration; as this may change in the future when detailed planning is undertaken by the Public Transport Authority for the future electrification of the railway line to Byford; and

2.2.3 Orton Road New – Local Road

Orton Road New is located in the southern portion of the DSP area, currently running east-west between Hopkinson Road and Warrington Road. Orton Road New is a Shire controlled road and is not reserved under the MRS.

The existing state of Orton Road New is rural in nature, with a narrow single carriageway allowing for one lane in either direction. The Byford DSP indicates that the road is to be realigned to the west of Doley Road and be extended from Warrington Road to Soldiers Road. Other changes to the alignment of the road are proposed towards Tonkin Highway where the road is proposed to connect into Tonkin Highway.

The width of Orton Road New will be up to 30m.

The upgrade and construction of Orton Road New will occur between the Tonkin Highway MRS Primary Regional Road reserve and Soldiers Road. The costs of the land for the Orton Road reserve will take account of the existing road reserve where possible.

In accordance with SPP 3.6, the following items are included in the DCP for Orton Road New:

- Land required to achieve a road reserve up to 30 metres in width;
- Earthworks for the whole road reserve;
- Complete road construction based on a single lane split carriageway with central median;
- Associated drainage works including water sensitive urban design measures;
- Traffic control devices including the following intersection treatments:
 - (a) Doley Road – full cost of roundabout;
 - (b) Warrington Road – full cost of roundabout; and,
 - (c) Soldiers Road – full cost of roundabout.
- Shared paths;

- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total cost for Orton Road New is estimated at \$14,172,882 including land costs of \$1,049,750. A detailed breakdown of the costs is provided in Appendix C.

The following items are not included in the DCP for Orton Road New:

- Minor intersections treatments into Orton Road New from the adjoining subdivisional road network. These will be subject to a standard truncation requirement; and
- Any intersection treatment with Tonkin Highway. Tonkin Highway is a Primary Regional Road under the MRS and is a responsibility of Main Roads WA.

2.2.4 Kardan Boulevard – Local Road

Kardan Boulevard is located in the north-west portion of the DSP area, providing a north-south connection between Thomas Road and Abernethy Road and. Construction of the road is proposed under the Byford DSP as it will provide an important connection for district traffic and public transport movements.

In light of Kardan Boulevard's role, the Shire has, subject to final design, required a road width of 25 metres from Abernethy Road to Fawcett Road and 30 metres from Fawcett Road to Thomas Road.

The construction of Kardan Boulevard will occur between Thomas Road and Abernethy Road.

In accordance with SPP 3.6, the following items are included in the DCP for Kardan Boulevard:

- Land required over and above a standard 20 metre road reserve width to achieve a road reserve up to 30 metres in width;
- Earthworks for the whole road reserve;
- Complete road construction based on a single lane split carriageway with central median;
- Associated drainage works including water sensitive urban design measures;
- Shared paths;
- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total cost for Kardan Boulevard is estimated at \$6,980,607 including land costs of \$468,350. A detailed breakdown of the costs is provided in Appendix D.

The following items are not included in the DCP for Kardan Boulevard:

- Minor intersections treatments into Kardan Boulevard from the adjoining subdivisional road network. These will be subject to a standard truncation requirement;

- Land required to achieve a standard 20m road reserve, which will be ceded free of cost as part of the subdivision process.

2.2.5 San Simeon Boulevard – Local Road

San Simeon Boulevard is located in the northern portion of the DSP area, providing a northwest-southeast connection between Thomas Road and Abernethy Road. The road is also commonly referred to as the Thomas Road deviation and is identified in the DSP. San Simeon Boulevard will play an important district role by providing a direct connection for residents and traffic into the Byford Town Centre. The road will provide a direct access option to and from the Town Centre and assist in limiting vehicle movements through the Byford Trotting Complex.

In light of San Simeon's role, the Shire, subject to final design, has required a road width of 22.5 metres from Thomas Road to Larsen Road and 27.5 metres from Larsen Road to Abernethy Road. The 22.5 metre road reserve is proposed in areas adjacent to public open space and 27.5 metre in built up areas (i.e. the proposed town centre).

The construction of San Simeon Boulevard will occur between Thomas Road and Abernethy Road.

In accordance with SPP 3.6, the following items are included in the DCP for San Simeon Boulevard:

- Land required over and above a standard 20m road reserve width to achieve a road reserve up to 30 metres in width;
- Earthworks for the whole road reserve;
- Complete road construction based on a single lane split carriageway with central median;
- Traffic control devices including the following intersection treatments:
 - (a) Larsen Road – full cost of roundabout; and,
 - (b) Byford Town Centre main street – full cost of roundabout.
- Associated drainage works including water sensitive urban design measures;
- Shared paths;
- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total cost for San Simeon Boulevard is estimated at \$13,518,885 including land cost of \$1,041,200. A detailed breakdown of the costs is provided in Appendix E.

The following items are not included in the DCP for San Simeon Boulevard:

- Minor intersections treatments into San Simeon Boulevard from the adjoining subdivisional road network. These will be subject to a standard truncation requirement;
- Land required to achieve a standard 20m road reserve, which will be ceded free of cost as part of the subdivision process.

2.2.6 Doley Road – Local Road

Doley Road is located in the southern portion of the DSP area, providing a north-south connection between Abernethy Road and Orton Road New. Doley Road will play an important district role by providing vehicle access into the proposed local centre, which will cater for a wide catchment population. The Road is identified in the Byford DSP.

In light of this role, the Shire has, subject to final design, required a road width of 30m for Doley Road.

The construction of Doley Road will occur between Abernethy Road and Orton Road New.

In accordance with SPP 3.6, the following items are included in the DCP for Doley Road:

- Land required to achieve a road reserve up to 30 metres in width;
- Earthworks for the whole road reserve;
- Complete road construction based on a single lane split carriageway with central median;
- Associated drainage works including water sensitive urban design measures;
- Shared paths;
- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total cost for Doley Road is estimated at \$10,893,310 including land cost of \$831,250. A detailed breakdown of the costs is provided in Appendix F.

The following items are not included in the DCP for Doley Road:

- Minor intersections treatments into Doley Road from the adjoining subdivisional road network. These will be subject to a standard truncation requirement;
- Land required to achieve a standard 20m road reserve, which will be ceded free of cost as part of the subdivision process.

2.2.7 Warrington Road – Local Road

Warrington Road is located in the southern portion of the DSP area, providing a north-south connection between Abernethy Road and Orton Road New. The Road is identified in the Byford DSP and passes through an area of highly fragmented landownership. Warrington Road has been included within the Byford DCP to ensure a coordinated upgrade catering for increased traffic volumes.

The width of Warrington Road, subject to final design, will be 20 metres thus not requiring additional land for road widening.

The upgrade and construction of Warrington Road will occur between Abernethy Road and Orton Road New.

In accordance with SPP 3.6, the following items are included in the DCP for Warrington Road:

- Earthworks for the whole road reserve;
- Complete road construction based on an undivided single carriageway;
- Associated drainage works including water sensitive urban design measures;
- Shared paths;
- Utility removal, relocation and insertion; and
- Associated costs including design and management.

The total cost for Warrington Road is estimated at \$6,688,693. A detailed breakdown of the costs is provided at Appendix G.

The following items are not included in the DCP for Warrington Road:

- Minor intersections treatments into Warrington Road from the adjoining subdivisional road network. These will be subject to a standard truncation requirement;
- Any land required to achieve a standard 20m road reserve, which will be ceded free of cost as part of the subdivision process or use of the existing road reserve.

2.2.8 Contingencies

Due to the civil construction industry being subject to cost variations due to capacity constraints and cost of materials changes, estimated costs generally include cost contingencies. The degree of contingency applied to each item relies on the level of works design, scale of works and other industry factors.

For a particular road, different contingency rates might apply to different cost items.

For road costs, generally a contingency of 10% to 20% will be applied. It is recognised the amount of contingency required is reduced by the use of cost escalators between each review. Reducing the contingency rate by half the applicable escalator rate is appropriate between cost reviews.

2.2.9 Road Items Not Included

Road Reserve Improvements

The amenity of urban areas can be substantially enhanced through public realm improvement works such as vegetation, hard landscaping, public art and higher design standards of infrastructure. Road reserves provide significant opportunities for amenity enhancement, especially in the case of wider reserves such as distributor roads and in the instance of split-carriageways.

Within the DSP area, Thomas Road, Abernethy Road, Orton Road New and the other distributor roads have the ability to incorporate significant improvement works.

There is, however, not a clear nexus between development in a new urban area and its associated increase in traffic, and the need for general road reserve improvements.

Nonetheless, it should be noted most developers undertake works to provide attractive streetscapes as a marketing feature, especially in the context of distributor and connector roads leading into new estates. As such, road reserve improvements, such as hard and soft landscaping and higher design standards of infrastructure, are not included in the DCP.

2.3 District Open Space Improvements

The Shire's Community Facilities and Services Plan (CFSP) states the playing fields required by the community ultimately will need to be provided with field lighting for training purposes, club storage areas, spectator toilets, and in some instances change room facilities complete with umpires and first aid rooms, and clubrooms for clubs to enable them to operate effectively.

These facilities will cater for the rapid growth in population and in memberships with local sporting clubs that are in need of new facilities. An area of district open space has been provided by developers in Byford Central for junior sporting use. Another senior sized playing field is being developed in the West Byford Primary School/ Kalimna District Open Space for which a Joint Use Agreement (JUA) has been negotiated. The Byford Primary School / Glades District Open Space will also provide a senior sporting field for which a Joint Use Agreement is required.

Another JUA also will need to be negotiated between the Shire, the Department of Education and the Catholic Education Office for the State High School and the Catholic K-12 School just north of the Recreation Centre. It is likely that at least two, senior sized (165m x 135m), AFL playing fields will be located on these sites along with two Hockey/Soccer/Rugby Pitches. Community consultation has identified the need for playing fields to be designed to cater for codes that are not yet operating in the Shire (such as Soccer, Hockey, and Rugby). This will require the playing fields to be larger than standard size to allow for the different dimensions of different sporting code's playing fields.

The rationale for pursuing JUAs is that there are significant economies of scale and efficiencies involved which will allow schools to become a focal point for the community.

The partial construction of the District Open Space (DOS) facilities on land acquired by the DCP is included within the DCP at the following sites:

- Byford Central DOS (Soccer);
- Kalimna DOS (senior AFL oval); and
- The Glades DOS (senior AFL oval).

The scope of construction included in this DCP is confined to land and below surface works including drainage, irrigation and grassing. Further above ground works will be included in the Shire's proposed Community Infrastructure DCP.

Figure 4 – District Open Space to be improved and/or constructed through the DCP

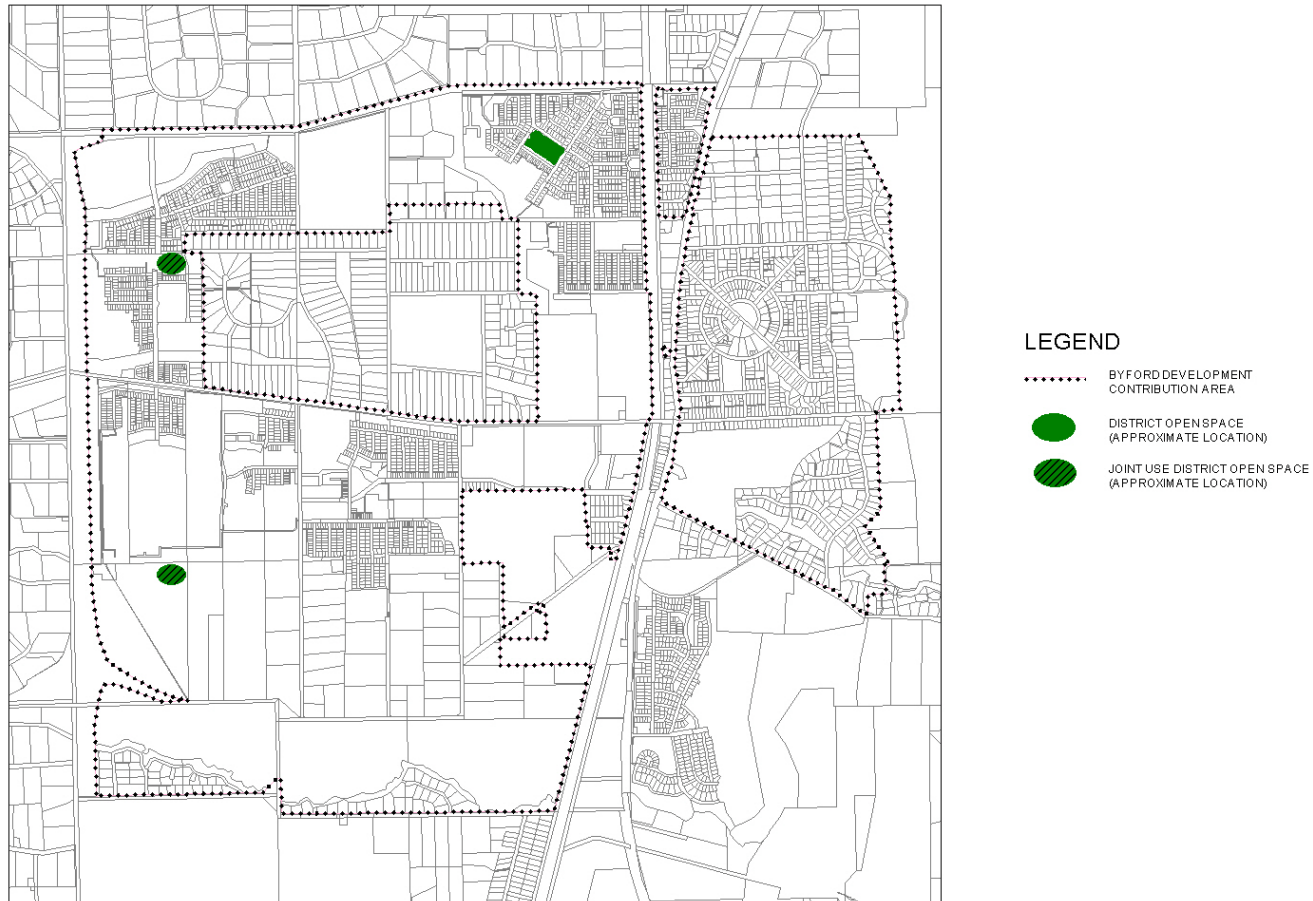

FIGURE 4: DISTRICT OPEN SPACE DEVELOPMENT

2.3.1 Byford Central District Open Space (Soccer)

The Byford Central DOS is too small for AFL competition (senior or junior) however it is the correct size for Soccer. The Youth strategy survey found that 19% of the respondents played soccer. There is a keen interest in Soccer within the Shire, however, this interest has not developed into sporting teams possibly due to the lack of volunteers and appropriately sized fields.

The following items are included in the DCP:

- Earthworks;
- Grassing;
- Irrigation; and
- Associated costs relating to construction including design and management.

The total cost for Byford Central DOS (Soccer) eligible works is estimated at \$1,119,284. The cost estimate is based on actual costs escalated to July 2013. This oval is not associated with a school facility. A detailed breakdown of the costs is provided in Appendix H.

Figure 5 - Byford Central District Open Space (Soccer)

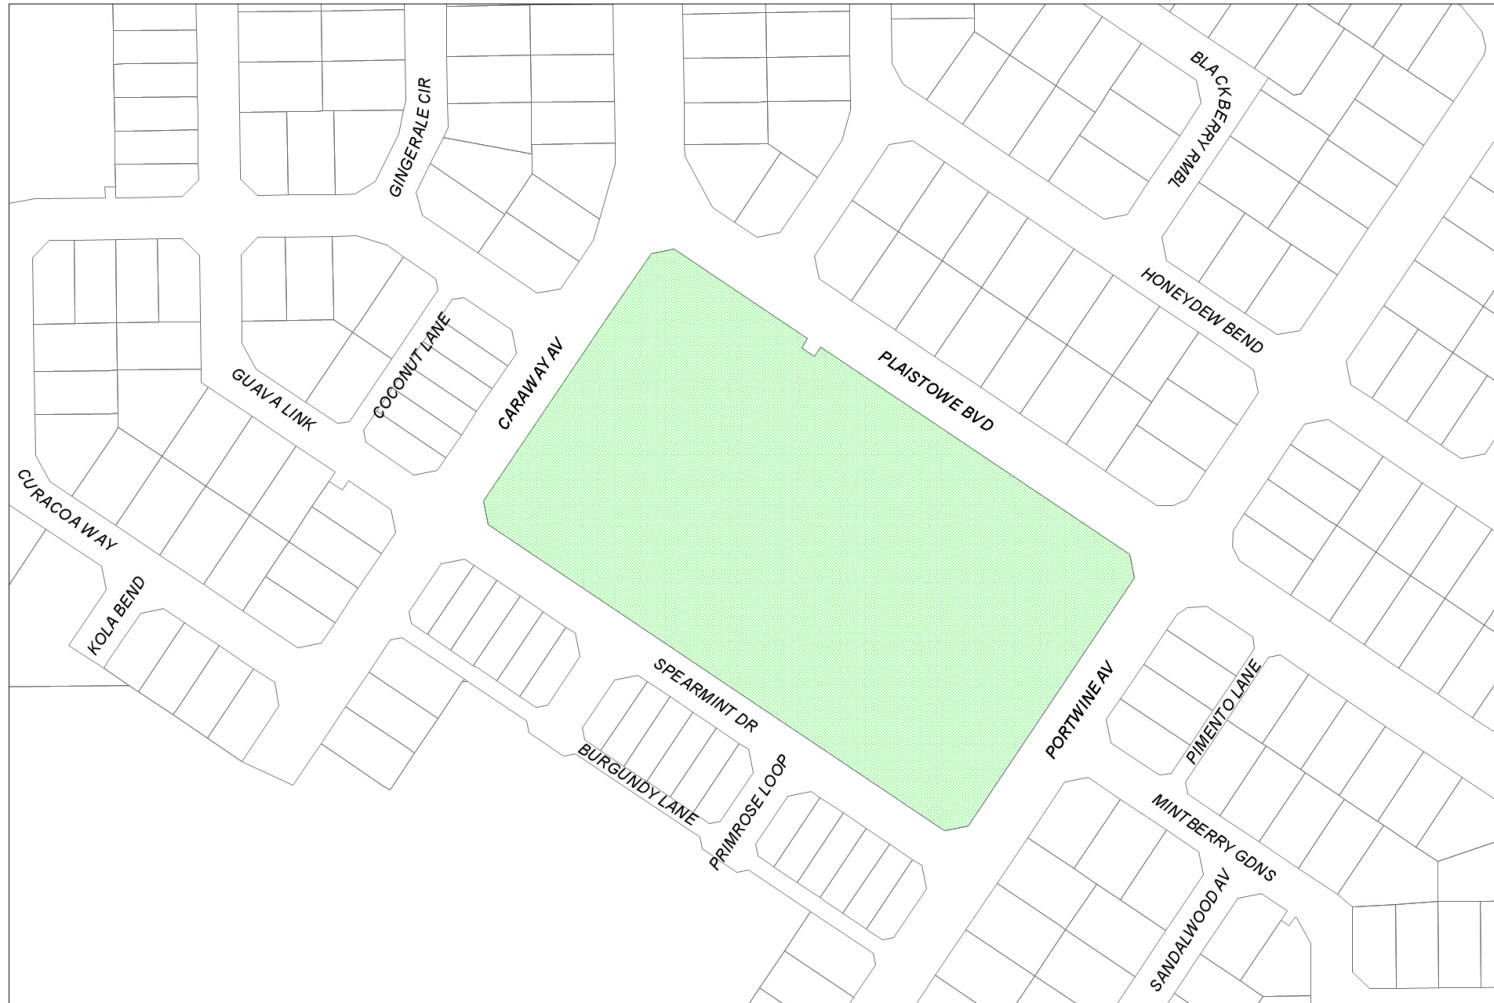

Figure 5 : Byford Central District Open Space

2.3.2 The West Byford Primary School/ Kalimna District Open Space Oval (Senior AFL)

This will be a full sized AFL Oval (165m / 135m) partially located on Department of Education land and will be subject to a JUA. The JUA shares the cost of developing the oval between the Shire and the Department of Education.

As with all clubs, the Centrals Senior and Junior Clubs are experiencing rapid growth in their playing membership due to the rapid population increase brought on by new developments. Based on figures provided by the club, the juniors are projected to add two new teams each year for the foreseeable future and the seniors will also add an additional team each year. The Cricket clubs are also experiencing growth. It is because of this growth that these clubs are out-growing their existing facilities and require new facilities to be able to keep up with demand from the increasing population. According to the Youth Strategy, almost a quarter (21%) of young people played football.

The following items are included in the DCP:

- Earthworks;
- Grassing;
- Irrigation; and
- Associated costs relating to construction including design and management.

The total cost for Kalimna DOS (AFL) is estimated at \$982,485 based on claimed actual costs escalated to July 2013. The DCP share will be \$491,242. A detailed breakdown of the costs is provided in Appendix I.

Figure 6 - The West Byford Primary School/ Kalimna District Open Space Oval (Senior AFL)

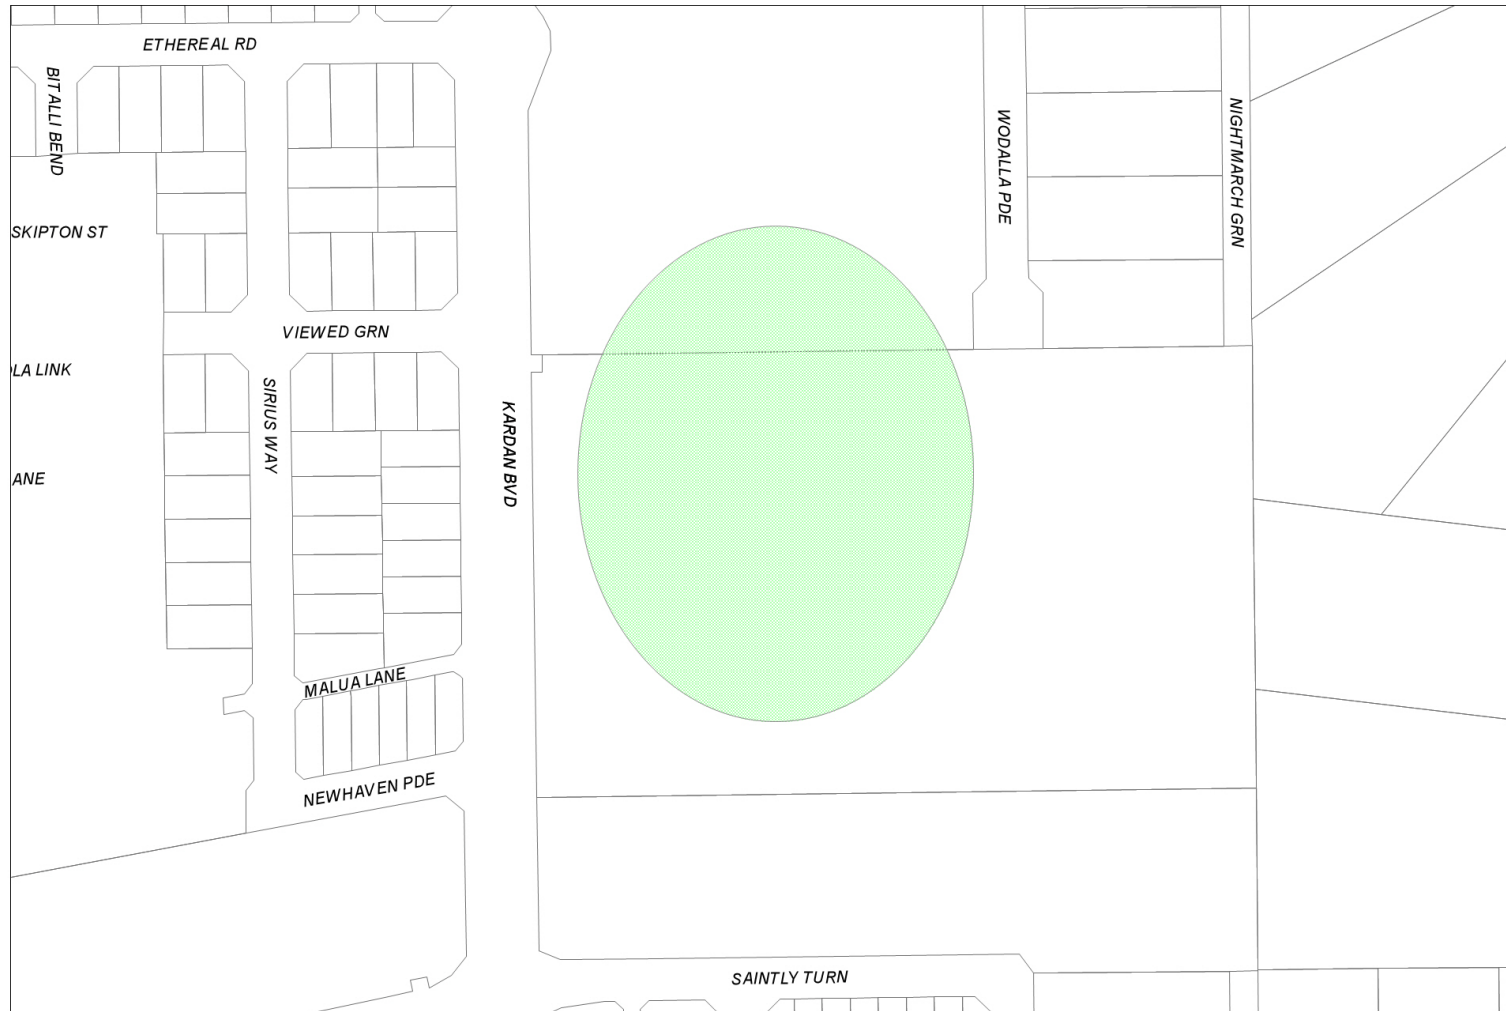

Figure 6 : Kalimna District Open Space

2.3.3 The Byford Primary School/The Glades District Open Space Oval (Senior AFL)

This will be a senior sized AFL size field which will be partially located on Department of Education land and a JUA is being negotiated. The JUA will share the cost of developing the oval between the Shire and the Department of Education.

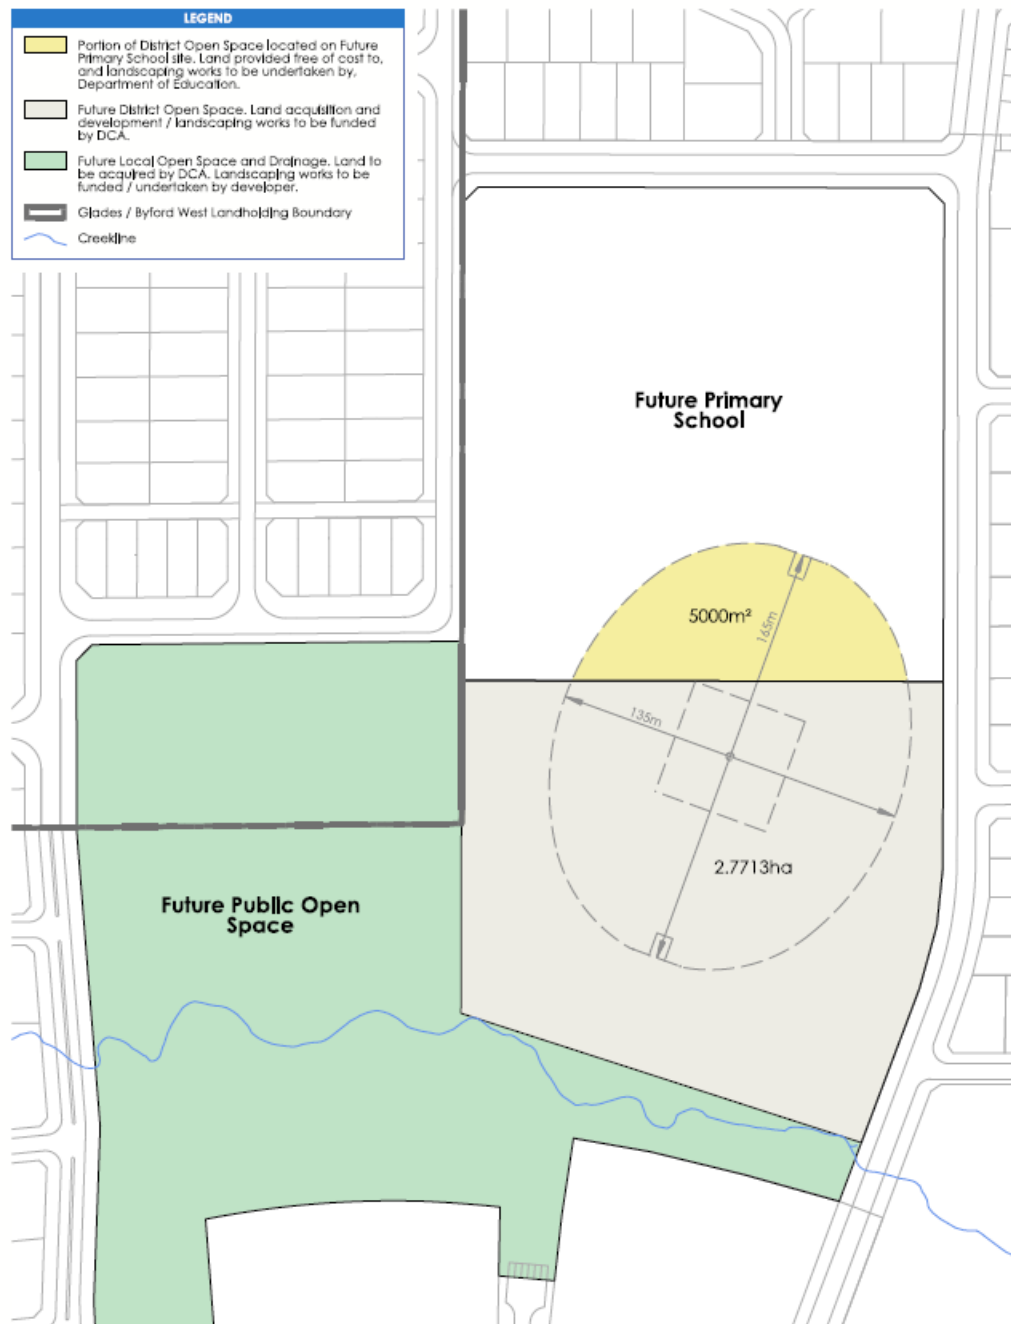

As with the revealed demand for the Kalimna DOS, The Glades is expected to experience a similar level of sporting demand.

The following items are included in the DCP:

- Earthworks;
- Irrigation;
- Grassing; and
- Associated costs relating to construction including design and management.

The costings originally estimated for The Glades DOS were based on a junior sized oval. The increase in status to a senior sized oval is assumed to result in similar costs as incurred for the Kalimna DOS. The total cost for the Byford Primary School/The Glades DOS (senior AFL sized oval) is therefore estimated at \$934,161. The DCP share is assumed to be \$467,080 in line with the contribution split at Kalimna. A detailed breakdown of the costs is provided in Appendix J.

Figure 7 - The Byford Primary School/The Glades District Open Space Oval (Senior AFL)

2.4 Land for Public Open Space and/or Drainage

A significant amount of land will be provided within the Byford DSP area for:

- Public open space (POS);
- District open space (DOS);
- Dual-function POS and drainage land; and
- Drainage purposes.

This land includes:

- A mix of multiple-use corridors with a dual drainage and recreation function;
- Local and neighbourhood parks;
- Larger district-level playing fields including where provided to complement school playing fields; and
- Land purely for drainage purposes.

In the context of planning undertaken for Byford, it is difficult in many instances to clearly identify and distinguish between land required for recreation and land required for drainage. This is due to:

- The existence of multiple-use corridors and other POS entailing a dual drainage and recreation function.
- Numerous LSPs being prepared based on different POS credit calculation methodologies based on different versions of Liveable Neighbourhoods.
- Deposited plans of subdivision being endorsed containing combined reserves for drainage and recreation.
- Early structure planning and subdivision being based on the adopted Byford Urban Stormwater Management Strategy. This Strategy has now been replaced with the Byford Townsite Drainage and Water Management Plan, that is guiding more recent LSPs and subdivision applications.

To ensure compliance with Clause 10.3.6 of TPS 2, all land required for public open space and drainage is included in the DCP. This will ensure transparency, equity in terms of land required for district benefit and simplicity of calculation.

Land for DOS and POS & Drainage and associated costs is contained in Appendix K.

2.4.1 Estimated Amount of Land for POS and Drainage

A significant amount of detailed planning has been completed for the Byford DSP area, in the form of LSPs. This level of planning allows for the specific identification of land areas required for drainage and/or POS. More recently the finalisation of the Byford Town Centre has identified additional land for drainage between South West Highway and George Street and to the east of the high school site.

There are however several areas within Byford which have not yet been subject to the preparation of LSPs, including the Doley Road, Mead Street, Briggs Road and Stanley Road areas (see Figure 8). To ensure that appropriate funds are collected to allow for the future purchase of land required for public open space and drainage within these areas, it has been necessary to determine an estimated amount for each precinct.

The following methodology has been applied:

1. A review of LSPs and spatial data has been undertaken to identify the total amount of land covered by each LSP and the total amount of land required for POS and drainage.
2. From these totals, the percentage of land required for POS and drainage has been calculated.
3. Spatial data has been used to identify the total land area of areas in Byford for which LSPs have yet to be prepared.
4. The percentage identified in step 2 has then been applied to the total identified in step 3 to generate an estimated amount of land required for POS and drainage in these areas.
5. The POS and drainage land areas identified in step 1 and step 4 are then added to identify a total estimate of land required for POS and drainage within Byford DCA1.

Based on this methodology, it has been estimated that 116.0127 ha of land will be required for POS and drainage in the Byford DCP.

Figure 8 – Local Structure Plan Areas and Areas Not yet Subject to a LSP

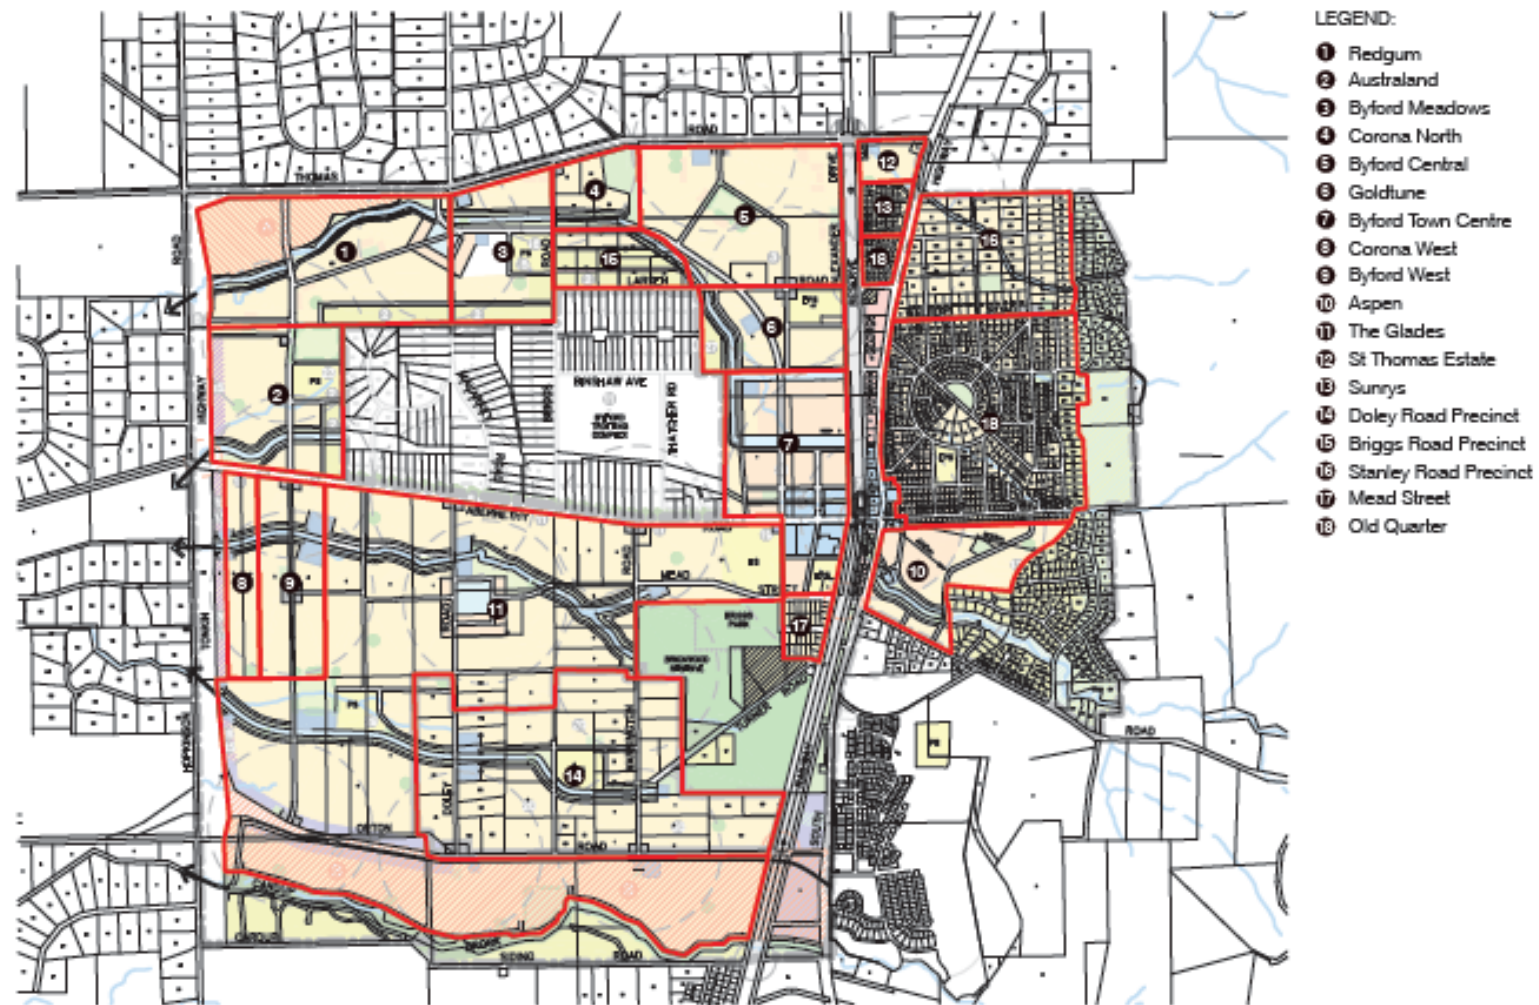

FIGURE 5
 LOCAL STRUCTURE PLAN AREAS AND AREAS NOT YET SUBJECT TO A LOCAL STRUCTURE PLAN

DATE 10.08.2010 REV 4
 DWG NO 001 SCALE NTS

The following tables provide a detailed breakdown of the calculations:

Local Structure Plan Area	Total Site Area (ha)	Public Open Space Land (ha)	Source
Redgum North & South	68.5500	10.8000	LSP Mar 2010 & LSP Apr 2005
Kalimna	52.6424	5.5800	LSP Oct 2008
Byford Meadows	29.4000	2.1000	LSP Jun 2010
The Reserve	8.7759	1.6800	LSP Oct 2009
Byford Central	65.000	3.8566	LSP Jan 2006
Goldtune	28.8500	5.8500	LSP Jun 2009
Byford Town Centre	78.5700	8.0675	LSP Apr 2013
Grange Meadows	16.6000	1.6000	LSP Apr 2010
Byford West	31.5600	4.0700	LSP Mar 2010
Aspen	32.3000	3.8000	LSP Oct 2009
The Glades	329.4532	43.4087	LSP Jul 2009
St Thomas Estate	5.4582	1.1868	DP 57070
Sunrays	6.3500	0.4400	GIS
Total	753.5097	92.4396	
Percentage of POS to Total Site Area		12.27 %	

Non-Structure Planned Areas	Total Site Area (ha)	Estimated Public Open Space Land (ha)	Applied % for Estimate
Doley Road Precinct	119.7200	14.6896	12.27 %
Briggs Road Precinct	18.7700	2.3031	12.27 %
Stanley Road Precinct	48.8300	5.9914	12.27 %
Mead Street	4.8000	0.5890	12.27 %
Total	192.1200	23.5731	

Total POS and Drainage Land Area		116.0127	
---	--	-----------------	--

Notes:

- The St Thomas Estate and Sunrays sites were not subject to LSPs. POS and drainage land calculations were therefore undertaken on the basis of spatial data.
- The existing Byford Townsite (DCP Precinct C) is not subject to POS and drainage land contributions and has therefore not been included in the above calculations. Precinct C is, however, subject to DOS land obligations.
- Lot 7 Abernethy Road (adjacent to the proposed Tonkin Hwy reserve) is not included at this time as it is assumed that this land will be or is in the process of being purchased by Water Corporation.

2.4.2 Estimated Cost

Based upon the land value detailed in section 2.1 of this report, the total estimated cost of creditable POS in the Byford DCP is \$55,106,030 as detailed in the table below:

Total estimated amount of public open space	Land value	Total estimated cost
116.0127 ha	\$475,000/ha	\$55,106,030

2.4.3 Items Not Included

State Policy provides a clear indication that the development of POS to a minimum standard, and maintenance for a minimum period of time, is at the developer's expense. As such, the development and initial maintenance of POS is not included within the Byford DCP and will be the responsibility of the subdivider.

In addition, land identified as having conservation value, for example Bush Forever sites, is excluded from the DCP.

It should be noted that the Shire Council has resolved not to require POS contributions from subdivision and development in the existing Byford Townsite, identified as DCP Area C on Plan 16A of Appendix 16 of TPS 2 except for land required for DOS.

While the DCP includes land for drainage purposes, it does not include drainage works themselves (i.e. earthworks, drainage infrastructure such as piping, pits, mechanical treatments, water sensitive urban design treatments or similar). These are considered to be subdivisional works, generally required by local water management strategies and urban water management plans, and are also very difficult to calculate given the varying nature of drainage infrastructure provided and proposed throughout Byford. Developers may treat drainage works in various ways to benefit their development. The requirement to provide optimal certainty in costing DCP items to achieve equity between developers over time reinforces the need to exclude drainage works. The drainage works contained within the proposed roads are permitted to be included in accordance with SPP3.6.

2.4.4 District Open Space

Land identified as District Open Space (DOS) occurs in three LSPs. These are Byford Central (2.4434 ha), Kalimna (Australand) (4.0 ha) and The Glades (2.7713ha)

The total land for DOS is 9.2147 ha. At \$475,000 /ha, the budgeted cost of DOS land is \$4,376,980.

2.5 Multiple Use Trails (Bridle Trails)

An extension of the existing bridle trail network in proximity to the Byford Trotting Complex is proposed under the Byford DSP.

The trails provide an important medium term function in facilitating the safe access and movement of horses in proximity to the Byford Trotting Complex and where semi-rural development abuts proposed urban development. The trails may assist in establishing an appropriate interface between semi-rural and urban development.

In addition to the functionality of rural development in close proximity to urbanisation, the trails also provide provision for future road reserves to facilitate the long term and eventual urbanisation of the Byford Trotting Complex. No time frame, planning or alike is associated with the development of the rural zoned land in proximity to the Byford Trotting Complex. The trails, therefore, facilitate future urbanisation of the Byford Trotting Complex and are thus more appropriately dealt with at that time.

There is no case shown whereby need and nexus can be established for the bridle trails to become a responsibility of the DCP and are, therefore, excluded from the DCP. Existing trails were provided as part of subdivision of land contiguous to the trotting complex and provide no benefit outside of these areas to future residents in the DSP.

2.6 Water Monitoring

The Byford Townsite Drainage and Water Management Plan (DWMP) establishes a framework for new urban development, such that established stormwater water quantity and quality design objectives can be achieved and the concerns and risks identified by the Department of Water (DoW) and the Water Corporation can be addressed. The DWMP reinforces the Shire's commitment to ensuring that water sensitive urban design principles are incorporated into new urban development.

During the course of the review of the Byford DSP in September 2006, the Water Corporation raised a number of concerns regarding regional drainage planning for the Byford area. In November 2006, a "round-table" forum was convened with the then Department for Planning and Infrastructure, DoW, the Shire and the Water Corporation to discuss regional drainage requirements and to determine an appropriate path forward. The DoW subsequently engaged consultants SKM to prepare the Byford Flood Plain Management Strategy and then later engaged consultants GHD to further progress this work in the form of a DWMP. In February 2008, a draft DWMP for Byford was released by the DoW for public comment. The DWMP was published as a final document in September 2008.

Since the publishing of the final DWMP, all LSPs, detailed area plans, subdivision and engineering drawing applications have been assessed against the water quantity and quality design objectives outlined in the DWMP.

The DWMP provides a summary of monitoring requirements and responsibilities (an extract is provided on the following page):

Responsible Agency	Timing	Monitoring Requirement
Developers	Period of 3 years pre-development (minimum of 18 months with at least 2 winters with approval of DoW)	Monitor key criteria for maintenance of hydrologic regimes, buffers and ecological corridors/linkages of environmental assets Monitor local superficial aquifer groundwater levels Monitor flow and water quality (including nutrients, TSS, and gross pollutants) at regular intervals (monthly) Monitor peak flows (snapshots) within developments and wetlands
	Period of 3 years post-development, including at least 1 year following completion of the majority (80%) of developments	Monitor key criteria for maintenance of hydrologic regimes, buffers and ecological corridors/linkages of environmental assets Monitor local superficial aquifer groundwater levels Monitor flow and water quality (including nutrients, TSS, and gross pollutants) at regular intervals (monthly) Monitor peak flows (snapshots) within developments and wetlands Monitor behavioural patterns with respect to non-structural measures for water quality management Monitor performance of new drainage systems
DoW	Ongoing	Monitor efficacy of water conservation measures and achievement of water consumption targets Monitor regional surface water flows and quality Monitor confined aquifer groundwater levels and regional superficial aquifer groundwater levels and quality Monitor groundwater abstraction in the DSP area Monitor surface water quality and flows at strategic locations in main drains and waterways Monitor structural BMPs for efficacy with advice from the BMP technical reference group Monitor performance of new drainage systems across catchments and property boundaries
SJ Shire – with funding from developer contributions scheme	From 3 years post-development	Monitor key criteria for maintenance of hydrologic regimes, buffers and ecological corridors/linkages of environmental assets Monitor local superficial aquifer groundwater levels Monitor water quality and flows within developments and wetlands Monitor behavioural patterns with respect to non-structural measures for water quality management
DEC	Ongoing	Evaluate health of significant environmental assets

Water quality and quantity monitoring within developments and wetlands will be implemented by the Shire. The draft Byford DSP Area Sampling and Analysis Plan prepared by the Shire identifies the sampling and analysis requirements. It is proposed that monitoring be carried out over the life of the DCP. There will be 5 monitoring events run over an annual period with monthly sampling. Monitoring will be completed in year 0, 4, 8, 12 and 16. Alternatively, monitoring may be carried out as a percentage of build-out (ie. 0, 25, 50, 75 and 100 percent). No monitoring has been carried out to date.

Both approaches will allow longer-term trends in water quality and quantity to be identified and monitored as the Byford DSP area is fully developed. Suitable remediation works or structural controls may be implemented to rectify any identified problems.

It is likely that subdivision and development would not be approved within the Byford area without the approval and ongoing implementation of the Byford Townsite DWMP. As such, it is considered reasonable that the all costs of, and associated with, the required water monitoring be funded by developers within Byford.

The DCP will assume funding responsibility for the post development water-monitoring program required by the Byford DWMP.

The total cost for required water monitoring is estimated at \$944,547. A detailed breakdown of the costs is contained at Appendix L.

2.7 Outstanding Costs

Cost estimates relate to future works only. A cost to be recognised is the outstanding cost of completed works less contribution payments received.

Completed works cover all infrastructure works, land transfers and administration including water monitoring. The value of these works reduces the cost estimates applying to future works.

It is important to note that pre-funded works, where a credit has been given, constitute completed works. In the same vein, credits used to offset contribution payments become contribution payments received.

Outstanding costs are therefore the net of the cost of completed works less the value of paid contributions. It only will be possible to account for completed works and contributions paid after all Interim Deed credits and liabilities have been calculated following approval of this DCP Report and in accordance with LPP75.

DCP lot numbers also will be revised to account for lots developed.

2.8 Administrative Items

There is no obligation on the Shire to prepare and administer a DCP other than to support good and orderly development. The existence of a DCP is, however, important to landowners and developers where there are district level works that need to be provided as a precursor to subdivision.

Administrative items include all expended and estimated future costs associated with administration, planning and development of the Byford District Structure Plan, District Water Management Plan/s, preparation and implementation of the Byford Development Contribution Plan and any technical documents necessary for the implementation of the above, including:

Planning studies;

- Traffic studies;
- Drainage studies (including water management strategies);
- Road design costs where not allocated to specific roads;
- Other related technical and professional studies;
- Borrowing costs (including loan repayments); and
- Scheme Management Costs (including administration and management of the DCP).

Statutory planning costs are not included in the DCP except where directly benefitting the Byford DCP (for example, preparation of Amendment 168). Costs associated with Amendment 167 are not included.

The total cost for past and forecast administrative items is estimated at \$4,857,067. A detailed breakdown of the costs is provided in Appendices M and N.

2.9 Total Cost

The following table provides a summary of the total cost for all infrastructure, land and other items within the DCP.

Table 2.9 Summary of Costs

Item	Cost (\$)
Thomas Road	12,857,446
Abernethy Road	12,914,765
Orton Road	14,172,882
Kardan Boulevard	6,980,607
San Simeon Boulevard	13,518,885
Doley Road	10,893,310
Warrington Road	6,688,693
District Open Space – Improvements	2,073,045
Land for District Open Space	4,376,980
Land for Public Open Space & Drainage	55,106,030
Water Quality Management	944,547
DCP Administration	4,857,067
Total (Gross)	145,384,266
MRWA Grants for Thomas and Abernethy Roads	8,731,050
Total (Net)	136,653,216

2.10 Cost Escalators

Three cost escalators are used as described in 3.4.2. These are, namely:

2.10.1 Administration Escalation Rate (AER)

The Administration Escalation Rate (AER) is the rate at which the Western Australian Treasury Corporation (WATC) lends money to Local Government Authorities for a term of one year. For the 12 months from June 2013 the rate is 2.9%.

2.10.2 Infrastructure Escalation Rate (IER)

The Infrastructure Escalation Rate (IER) of 2.4% (2013/14 forecasts) is taken from a cost series produced by the WA Local Government Association (WALGA). The Road and Bridge Construction forecast is seen as the most appropriate index for infrastructure costs. This index is based on Construction Forecasting Council forecasts.

2.10.3 Land Value Escalation Rate (LVER)

The Land Value Escalation Rate (LVER) of 5.0% is a forecast provided by the land valuer who assessed the englobo land value rate for this Report.

3 Development Contribution Methodology

This section of the DCP Report sets out the methodology for determining the development contributions applicable within certain precincts of the Byford development contribution area. In a general sense, the development contribution area is divided into precincts and development contributions for each precinct will be made on a 'per lot' or dwelling basis. Additional detail and clarification on the operation of the methodology is provided in the following sections.

3.1 Precincts

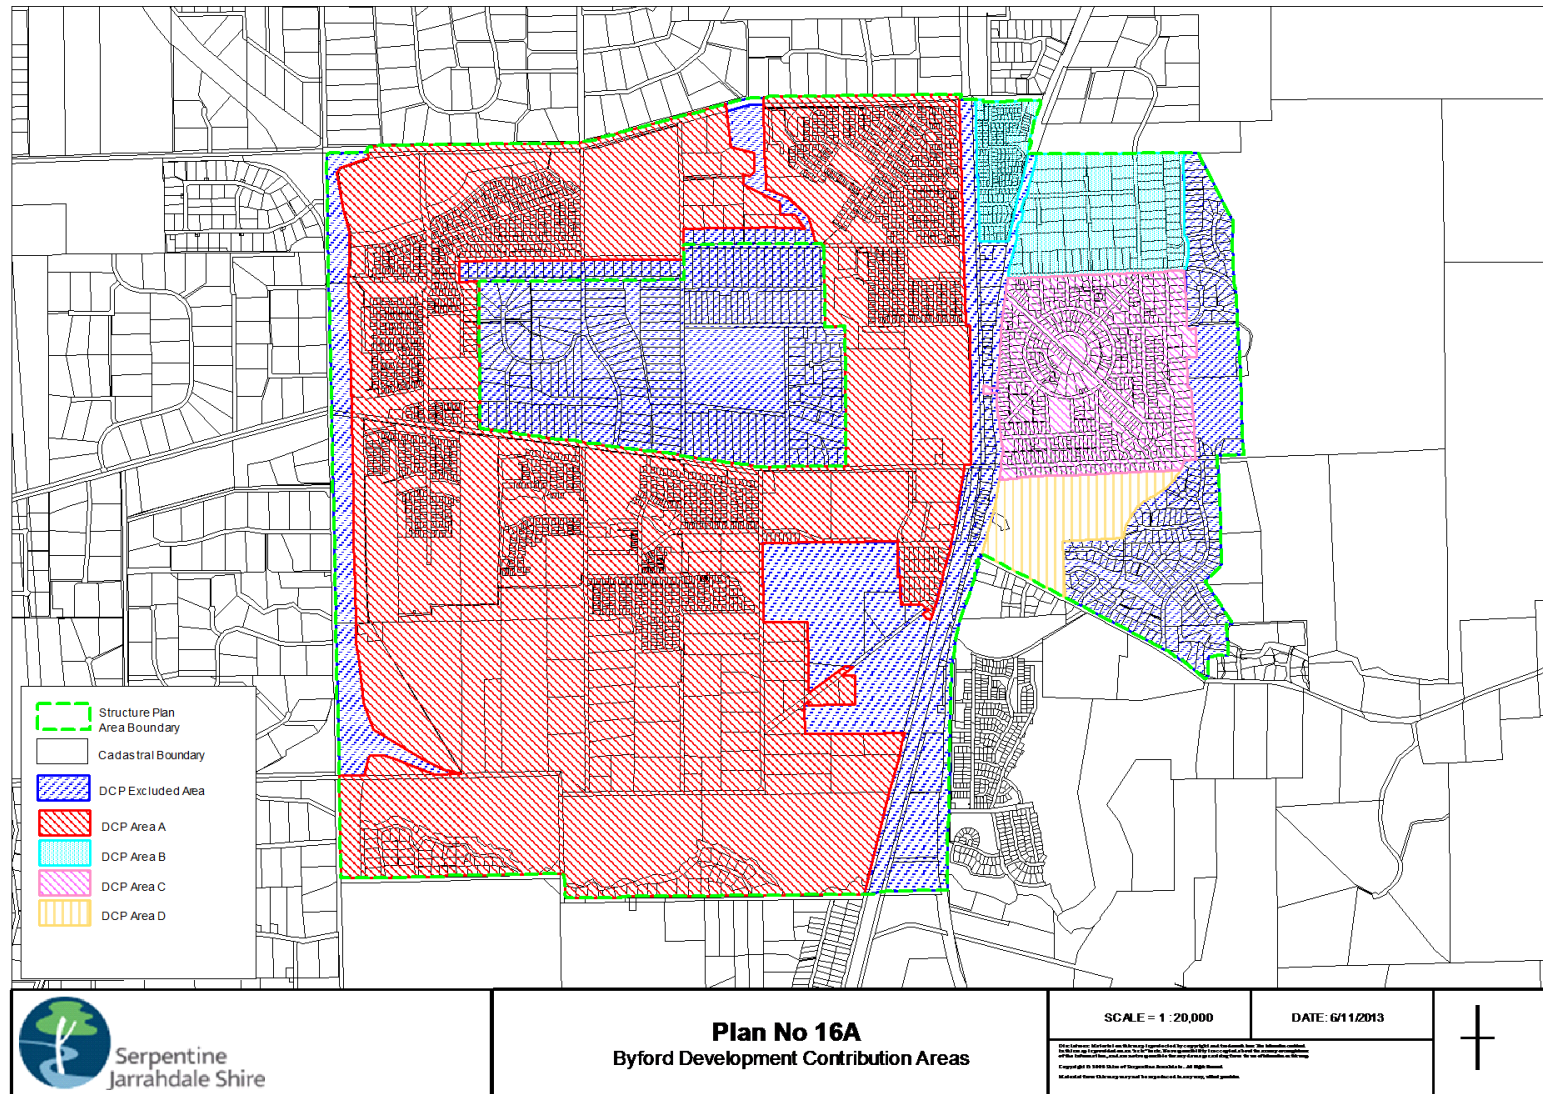

The Byford development contribution area is divided into four precincts, as indicated in Plan 16A of Appendix 16A of TPS 2. Development within each precinct will be required to contribute to a certain set of infrastructure and land items based on the perceived need for and use of those items within the precinct.

The following matrix identifies the precincts and what items they are required to contribute toward:

Table 3.1 (a) Precinct Contribution Items

Item/Precinct	A	B	C	D
Thomas Road	✓	✓	✓	✓
Abernethy Road	✓	✓	✓	✓
Orton Road	✓	✓	✓	✓
Kardan Boulevard	✓	x	x	x
San Simeon Boulevard	✓	x	x	x
Doley Road	✓	x	x	x
Warrington Road	✓	x	x	x
District Open Space Improvements	✓	✓	✓	✓
Land Acquisitions for District Open Space	✓	✓	✓	✓
Land Acquisitions for Public Open Space & Drainage	✓	✓	x	✓
Water Quality Management	✓	✓	✓	✓
DCP Administration	✓	✓	✓	✓

Figure 9 – Plan 16A of Appendix 16 of Town Planning Scheme No. 2 – Byford Development Contribution Area Precincts

Precincts B, C and D will not be required to contribute towards Kardan Boulevard, San Simeon Boulevard, Doley Road or Warrington Road. All of these roads are located within Precinct A and are considered to predominately cater for vehicular traffic within new development areas west of the railway reserve.

Council has resolved not to require POS contributions from subdivision and development in the existing Byford Townsite, identified as DCP Precinct C. This is due to the absence of a POS strategy or LSP identifying strategic locations for additional recreation lands. A strategy or LSP is necessary as it is difficult to achieve reasonably sized and consolidated areas of POS in the context of small and fragmented landholdings. Precinct C will, however, be required to contribute to DOS land and associated below surface improvements.

Furthermore, in the absence of an LSP and detailed drainage investigations, it has not been possible to determine the drainage requirements for Precinct C. The area, therefore, will not be required to contribute toward land for drainage purposes. This situation may be reviewed in the future pending further detailed planning and detailed investigations into drainage requirements.

Precincts A, B and D will be required to contribute toward land for POS and/or drainage. This land is required to cater for the recreational and drainage demands of development and has been identified in the Byford DSP and LSPs.

Due to the district function of Orton Road New linking with Tonkin Highway, Abernethy Road providing access to the Town Centre and Thomas Road providing a connection between South Western Highway and Tonkin Highway, all precincts are required to contribute towards these items.

All precincts will be required to contribute towards water monitoring and administrative costs. These items are required to facilitate the preparation of the Byford DSP and subsequently facilitate the preparation of LSPs and allow for subdivision and development to occur.

3.2 Estimation of Lot/Dwelling Potential

The development contribution methodology is based on a per lot/dwelling basis. Therefore it is necessary to estimate the potential number of additional lots/dwellings to be created in the Byford area. This estimate will be used to determine the development contribution rates per lot/dwelling.

The following methodology has been applied:

1. A review of LSPs and spatial data has been undertaken to identify the estimated total lot/dwelling yield for each area covered by an LSP or approved subdivision application.
2. The lot/dwelling estimates for greenfield areas not yet subject to LSPs have been determined through identifying their total land area, deducting 40 percent of this land area (accounting for land required for public purposes such as roads, POS and drainage), and then determining the subdivision/development potential of the remaining land area based on its residential density coding.

3. The lot/dwelling estimates for infill sites (ie. existing urban) not yet subject to LPSs were determined through manual calculations of the development potential of each landholding based on an R20 residential density of 450m².
4. By adding the lot/dwelling yields calculated in steps 1-3, the total estimated lot/dwelling yield for the Byford DCP area has been identified.

Based on this methodology, it has been estimated that 10,938 lots/dwellings will be created within the Byford DCP area as at the time of this Report. As lots extinguish their liability to pay contributions, the future lot count is revised at each cost review.

The table on the following page provides a detailed breakdown of the calculations:

Table 3.2 (a) Estimated Future Lot Yield By Project By Precinct

Local Structure Plan Areas	Total Site Area (ha)	Estimated Lot / Dwelling Yield				Source
		A	B	C	D	
Redgum North & South	68.5500	641				LSP Mar 2010 & LSP Apr 2005
Kalimna	52.6424	398				LSP Oct 2008
Byford Meadows	29.4000	300				LSP Jun 2010
The Reserve	8.7759	120				LSP Oct 2009 *
Byford Central	65.0000	713				LSP Jan 2006
Goldtune	28.8500	321				LSP Jun 2009
Byford Town Centre	78.2900	1,010				LSP Apr 2013
Grange Meadows	16.6000	225				LSP Apr 2010
Byford West	31.5600	380				LSP Mar 2010
Aspen	32.3000				360	LSP Oct 2009 *
The Glades	329.4532	3,315				LSP Jul 2009
St Thomas Estate	5.4582		60			DP 5070
Sunrays	6.3500		83			GIS
Total	753.2297	7,423	143	-	360	

*Utilising provision 3.4.2 of the DCP for computation.

Non- Structure Planned Areas	Total Site Area (ha)	Estimated Lot / Dwelling Yield				Source
		A	B	C	D	
Doley Road Precinct	119.7200	1596				Total area minus 40% (land for public purposes) divided by 450 sqm (R20)
Briggs Road Precinct	18.7700	28				Total area minus 40% (land for public purposes) divided by 4000sqm (Rural Living)
Stanley Road Precinct	48.8300		651			Total area minus 40% (land for public purposes) divided by 450sqm (R20)
Mead Street	4.8000	106				Total area (no land for public purposes) divided by 450sqm (R20)
Old Quarter	NA			631		Manual Calculations
Total		1,730	651	631	-	

Total Lots / Dwelling Yield		9,153	794	631	360	Structure Planned & Non-Structure Planned
------------------------------------	--	--------------	------------	------------	------------	---

Notes:

- Land for public purposes (ie. POS, drainage and similar) is expected to be provided within the Doley and Briggs Road precincts. As such, a 40 percent deduction has been applied to the total site area of each precinct.
- It is assumed that no land will be provided for public purposes within the Mead Street precinct given its existing development pattern. As such, a 40 percent deduction has not been utilised.
- In the absence of finalised LSPs depicting residential densities, an R20 code has been utilised to determine the lot/dwelling estimates for the Doley Road, Briggs Road and Mead Street precincts.
- Due to the nature of infill development proposed for the Stanley Road and Old Quarter precincts, lot/dwelling estimates have been made on the basis of manual calculations of the subdivision/development potential of each lot.

The following table identifies the current total estimated lot/dwelling yield for each of the Byford DCA precincts:

Table 3.2 (b) Estimated Future Lot Yield Totals By Precinct

DCA Precinct	Estimated Lot/Dwelling Yield
A	9,153
B	794
C	631
D	360
Total	10,938

3.3 Identifying the Contribution Rate for Each Precinct

As previously identified, the Byford development contribution area is divided into four precincts. Each precinct will contribute toward certain infrastructure and cost items. Each precinct will therefore have a different contribution rate.

To determine the contribution rate for each precinct, it is first necessary to identify the current total number of lot/dwellings which will be contributing to each item. From this, the contribution rate per lot/dwelling for each infrastructure item or cost can be determined. A breakdown is provided in the following table:

Table 3.3 (a) Contribution Rate Per Lot By Cost Item

Item/Precinct	Cost (\$)	Precinct	Lots Contributing	Contribution Per Lot
Thomas Road *	4,851,646	All	10,938	444
Abernethy Road *	12,189,515	All	10,938	1,114
Orton Road	14,172,882	All	10,938	1,296
Kardan Boulevard	6,980,607	A	9,153	763
San Simeon Boulevard	13,518,885	A	9,153	1,477
Doley Road	10,893,310	A	9,153	1,190
Warrington Road	6,688,693	A	9,153	731
District Open Space Improvements	2,073,045	All	10,938	189
Land Acquisitions for District Open Space	4,376,980	All	10,938	400
Land Acquisitions for Public Open Space & Drainage	55,106,030	A, B & D	10,307	5,346
Water Quality Management	944,547	All	10,938	86
DCP Administration	4,857,067	All	10,938	444
Total	136,653,216			

* Reduced by value of MRWA grants

The infrastructure and cost contribution rates per lot/dwelling applicable to each precinct can then be calculated, by adding the cost of each applicable item. The

table below identified the development contribution rate per lot/dwelling for each precinct.

Table 3.3 (b) Contribution Rate Per Lot By Precinct

Item/Precinct	Contribution Per Lot	A	B	C	D
Thomas Road	444	✓	✓	✓	✓
Abernethy Road	1,114	✓	✓	✓	✓

Water Quality Management	86	✓	✓	✓	✓
DCP Administration	444	✓	✓	✓	✓
Total Contribution Per Lot	-	13,480	9,319	3,973	9,319

3.4 Calculating the Contribution Rate for Landowners/Developers

At any point in time, the contribution rate/lot will vary according to Precinct and number of days since the last Cost Review.

The contribution rate is adjusted after each cost review in terms of contributions received, expenditure, cost estimates for each cost item and number of lots with paid contributions.

Various types of residential and non-residential subdivision and development will occur within Byford. The following sections identify how the methodology applies to each of these scenarios. For the purposes of calculating an R20 equivalent a minimum area of 450 m² will be implemented, as per State Planning Policy 3.1 (The Residential Design Codes).

3.4.1 Cost Review Input Into Contribution Rate Revisions

Cost Reviews will be undertaken at least annually

At the time of adoption of a cost review, the following contribution rate inputs will be reset:

- (a) Table 2.8 Summary of Costs
- (b) Table 3.2 (a) Estimated Future Lot Yield by approved Local Structure Plan by Precinct
- (c) Table 3.2 (b) Estimated Future Lot Yield by intended Local Structure Plan by Precinct
- (d) Table 3.3 (a) Contribution Rate Per Lot by Cost Item
- (e) Table 3.3 (b) Contribution Rate Per Lot by Precinct
- (f) Outstanding Cost of Completed Works (Expenditure on all Cost Items – Value of all Contributions Received)
- (g) Infrastructure Cost Escalator
- (h) Land Value Escalator
- (i) Administration Cost Escalator
- (j) Precinct Daily Escalation Rate

3.4.2 Calculating the Contribution Rate between Cost Reviews

To ensure costs are current during the time between cost reviews, all costs will be escalated on a daily basis calculated from an annual escalation rate. Escalation rates will separately apply to infrastructure costs, land costs and administration costs. The escalation rates will be set at each cost review. The starting point for daily escalation is the approval date for the prevailing cost review.

Given that each Precinct cost entail a different bundle of items, it is necessary to calculate a weighted escalation rate for each precinct.

$$\text{Precinct ER} = (\%IC/TC \times IER) + (\%LV/TC \times LVER) + (\%AC/TC \times AER)$$

Where for each precinct:

ER is the weighted Escalation Rate;

DER is the daily escalation rate (ER/365)

IC is the estimated Infrastructure Cost;

LV is the estimated Land Value;

AC is the estimated Administration Cost (Administration Cost includes Water Monitoring and Outstanding Cost of Completed Works);

TC is the Total Cost being IC + LV + AC;

IER is the Infrastructure Escalation Rate;

LVER is the Land Value Escalation Rate;

AER is the Administration Escalation Rate; and,

D is the number of days since the last cost review.

3.4.3 Standard Residential Subdivision or Development

In the instance of standard residential subdivision or development, development contributions for each precinct will be determined in the following manner:

*Precinct contribution rate per lot/dwelling x DER x D × number of
additional lots or dwellings being created*

=

Required development contribution

The calculation methodology works on the additional number of lots/dwellings being created. This approach is based upon each original lot either having, or having the potential to entail a single dwelling without the requirement for substantial infrastructure upgrades. The creation of the first dwelling or lot would therefore in effect, retain the status quo and not necessitate a contribution toward infrastructure upgrades, land and other items.

3.4.4 Non-Standard Residential Subdivision or Development

There may be instances in the Byford DSP area where the large-scale permanent residential development of a site is proposed without any standard residential subdivision and/or development (ie. a lifestyle village, retirement village, caravan park, park home estate or similar).

Development contributions will be required from such forms of non-standard residential subdivision/development as for Standard Residential Subdivision or Development shown in 3.4.3 above.

3.4.5 Non-Residential Subdivision or Development

Portions of land within the Byford area are expected to be developed for non-residential purposes, including retail/commercial, community purpose (or similar) and private schools. All forms of development contribute toward a need for new and improved infrastructure including roads. Non-residential development is no different in this regard.

Non-residential subdivision or development will be required to contribute toward land for public open space and drainage. The multiple use corridors in Byford provide both a drainage and recreation function, and will provide a means of access to non-residential developments.

Development contributions for non-residential subdivision or development will be calculated based upon the number of dwellings/lots that could have been created/developed at an R20 density (ie. the R20 subdivision/development potential of the site), minus the equivalent of the first lot created in a subdivision or first dwelling created in a development. For each precinct:

*Precinct contribution rate per lot/dwelling x DER x D × R20
subdivision/development potential of the site – the equivalent of one
lot or one dwelling*

=

Required development contribution

Land for primary and secondary public schools use will be exempt from paying development contributions.

For private education establishments and associated development, development contributions will be levied at 0.3 percent of the total development costs of the site, as agreed with the Shire based on the building licence application.

For the purposes of determining the total development contribution amount of the DCP, the following estimates have been made for each private school site based on developer advice:

- Abernethy Road private school proposal - \$15,000,000.00 based on Building Licence submission.

This 0.3 percent calculation method will only be applied where the private education establishment has entered into a joint use agreement with the Shire and/or Department of Education regarding the co-location and use of district open space and school ovals and associated facilities. The joint use agreement must ensure that the co-located and used facilities are publically accessible. Based on this approach, the discounted DCP contribution amounts to \$45,000 for the Catholic K - 12 school.

Where a joint use agreement is not in place as described above, development contributions will be levied based on the R20 subdivision/development potential of the site.

3.4.6 Mixed Use Development

In the context of mixed use development, the contribution rate is based upon the number of dwellings/lots that could have been created/developed at an R20 density, or the actual number of residential dwellings/lots being created at the time of subdivision/development, whichever is the greater, minus the equivalent of the first lot created in a subdivision or first dwelling created in a development.

Calculation based on the R20 site calculation. For each precinct:

*Precinct contribution rate per lot/dwelling x DER x D x R20
subdivision/development potential of the site – the equivalent of one
lot or one dwelling*

=

Required development contribution

Calculation based on the number of dwellings:

*Precinct contribution rate per lot/dwelling x DER x D x actual number
of residential lots/dwellings being created – the first dwelling being
created*

=

Required development contribution

Calculation examples are provided in section 7 of this report.

3.5 Future Subdivision/Development Potential

It is acknowledged that land within the Byford area may be developed to a density lower than that envisaged by the Byford DSP. Such development may however allow for additional subdivision and/or development in the future.

Contributions will be required for the creation of additional lots/dwellings post-initial development at the time that those additional lots/dwellings are created. Such additional contributions will be required in accordance with the DCP.

It should be noted that future lot yield is the base for calculation of contribution/lot. At each cost review the future yield will be adjusted to account for lots on which contributions have been paid.

3.6 Exemptions

Clause 10.3.13.3 of TPS 2 details various situations in which a development contribution is not required.

3.7 Interim Arrangements and Transition to a Finalised Contribution Arrangement

In the absence of a finalised DCP for Byford, the Shire had been entering into interim arrangements with subdividing and developing landowners in Byford. These arrangements involve the use of legal agreements to facilitate the collection of interim development contributions, and have been based on a per lot/dwelling methodology..

The Council has now approved LPP 75, Interim Development Deeds, which deals with the methodology for acquitting the Deeds upon gazettal of Amendments 167 and 168 and approval of this DCP Report. In essence, Deed credits and liabilities will be calculated by applying historical costs and land values to contribution liabilities deflated back to the time of subdivision clearance. This approach maintains the time nexus between costs and revenue (sales).

In the interests of ensuring a simple transition between the legal agreements and a formal DCP for Byford, there was no option but to utilise the per lot/dwelling methodology for the Byford DCP.

4 Priority and Timing of Provision

The following key principles are utilised to guide the identification of priorities for the provision of infrastructure and land acquisition, including:

- Minimising financial risk to the DCP– This can be achieved through the timely acquisition of land required for public purposes (public open space, roads etc.).
- Ensuring a constant turnover of funds – By managing the cash flow of the DCP, the Shire can optimise the use of funds between land acquisition and civil works and recoupment of developer pre-funding.
- Prioritising, where owner financial hardship is proven, the purchase of land identified for public purposes that encompasses all of, or a substantial portion of one landholding – Many of these landholdings are essentially “quarantined” from subdivision and/or development and would be difficult to sell to a private buyer.
- Constructing infrastructure on an “as needs” basis to facilitate development – This is especially apparent in the context of road upgrades.
- Undertaking works and land acquisition in areas of fragmented ownership – this assists in the successful and coordinated development of these areas. In areas of consolidated ownership, most infrastructure and land is provided by the developer as offsets to cost contributions.
- Grant funding opportunities – the Shire will actively seek grant funding to assist in the provision of DCP infrastructure. In most instances, the use of grant funding is reliant on the Shire providing a matching or partial contribution. The Shire may utilise DCP funds and elevate the priority and timing of an infrastructure item to capitalise on grant funding opportunities. This approach is beneficial to the long-term financial viability of the DCP.

The following items have been determined by the Shire as interim priority items. The timing of these items cannot be identified at present, as the Shire cannot reasonably predict the flow of development contribution funds into the DCP.

- Reconciliation of Interim Development Deed credits/liabilities;
- Thomas Road/Kardan Boulevard intersection;
- Thomas Road/Plaistowe Boulevard Intersection;
- Thomas Road second carriageway; and
- Past Administration costs

A detailed schedule of priorities and timing at this stage is considered premature and potentially unreliable. The identification of priorities will be undertaken on at least an annual basis as part of the cost estimate review and associated DCP Report update.

5 Period of Operation and Review

The DCP will operate for a period of 20 years from date of gazettal of the related scheme amendment to incorporate the DCP into TPS 2 as Appendix 16A.

The DCP will be reviewed when considered appropriate, having regard to the rate of subsequent development in the area since the last review and the degree of development potential still existing, but not exceeding a period of 5 years.

The DCP Report, incorporating cost estimates and cost escalators, will be reviewed at least annually, allowing for more frequent reviews to be completed on an as-required basis having regard to cost volatility and development priorities. The view of the Byford Infrastructure Reference Group will be sought when revising the cost estimates.

Where the costing and details of the DCP Report are:

- revised based on accounting for completed works;
- revised based on construction cost increases/decreases;
- revised based on land value increases/decreases; and
- revised based on revisions to the anticipated undeveloped lot yield;

and not subject to other material change, the revised DCP Report may not be advertised for public comment, but will remain available for public inspection. All landowners with current subdivision approvals will be automatically advised of each revision of the DCP Report. The Byford Infrastructure Reference Group (BIRG), comprising all major landowners, will be consulted as part of its regular agenda.

6 Operational Matters

This section of the DCP Report addresses various operational matters associated with the Byford DCP.

6.1 Estimation of Costs

This matter is dealt with in Clause 10.3.11 of TPS 2.

6.2 Land Valuation

The definition of value is dealt with in Clause 10.3.12 of TPS 2. The valuation base is further refined to cover the process in the Byford DCA whereby:

The net land value is to be determined in accordance with the definition of "value" in cl.10.3.12 and having general regard to the International Valuation Standards Committee's definition of market value as adopted by the Australian Property Institute. To account for the direct transfer of land, the fair market value should be discounted by standard marketing costs including fees, commissions and advertising costs and by the prevailing DCP contribution liability which otherwise would have applied to the land.

Market Value shall be determined by methodology primarily based on comparable sales evidence. Analysis of comparable sales shall account for all circumstances that might affect value, either advantageously or prejudicially, and that development contributions or other statutory charges are not attributable to the Land.

Market Values of Land shall include GST.

Valuations should have due regard to the characteristics of the Land including:

- a) highest and best use, zoning, development density and efficiency;
- b) physical characteristics such as size, topographical, aesthetic, geological and environmental factors;
- c) location, access and surrounding amenities;
- d) market conditions and the then present demand for land; *and*
- e) development levies.

6.3 Liability for Contributions

This matter is dealt with in Clause 10.3.13 of TPS 2.

6.4 Payment of Contributions

This matter is dealt with in Clauses 10.3.14 of TPS 2.

6.5 Arbitration

This matter is dealt with in Clause 10.3.19 of TPS 2.

6.6 Implementation

Development contributions may be calculated and applied as conditions of subdivision, strata subdivision and development.

6.7 Form of Contributions

Pursuant to Clause 10.3.14 of TPS 2, conditions relating to development contribution requirements can, to the satisfaction of the Shire, be satisfied by:

- The ceding of land;
- The construction of infrastructure works which are transferred to public authorities on completion;
- The provision of monetary contributions to acquire land or undertake works by the Shire, public authorities or others where covered by the DCP; or
- A combination of the above.

6.8 Pre-funding of Infrastructure Items

6.8.1 Context

Where,

- The Developer wishes to undertake works specified in Appendix 16A;
- The works are necessary for the progression of an approved subdivision; and,
- The Shire does not hold sufficient DCP funds to undertake the works and/or has not prioritised such works,

The Shire will support pre-funding and delivery of the infrastructure provided there are good reasons for doing so.

6.8.2 Pre-funding Agreement

By way of an exchange of letters, the Shire and the Developer will agree the extent, composition and timing of the infrastructure works to be pre-funded. Once agreed, the works become the Approved Works. The Approved Works must be identified sufficiently to ensure the cost and quantities of remaining works in that item can be quantified. This is particularly relevant where linear rates are involved.

6.8.3 Principles for Cost Recoupment

The recoup is to be based on the Current Cost Estimate in Accordance with TPS 2 clause 10.3.11 whereby,

- The current cost estimate (excluding contingency allowance) as described in the prevailing DCP Report shall constitute the claimable amount for the completed Approved Works

- The cost estimate will be subject to escalation at the rate prescribed from time to time in the DCP Report up to the time of agreed practical completion of the works
- The cost estimate may be revised due to the periodic Cost Review in which case the updated cost estimate will prevail
- If the actual cost of the works exceeds the escalated cost estimate, the developer may claim an additional amount not exceeding the contingency allowance provided for this item of work. Such a claim shall be independently substantiated to the satisfaction of the Shire
- Credit for land will be at valuation in accordance with 10.3.13 of TPS 2 where the valuation is current at time of transfer.

Note: Grants or other external Funding shall be deducted from any recoup or credit to the account of the developer

6.8.4 Acceptance of Works

The Developer shall ensure the works are:

- Undertaken in a proper and workmanlike manner
- In accordance with plans and specifications constituting the Approved Works
- Completed within the agreed period

Following written notification from the Developer that the Approved Works are complete as above, the Shire will confirm the delivery of the Approved Works to its satisfaction.

The Shire can modify, accept or reject the claim where justified, following review of standard and cost. Referral to the Byford Industry Reference Group for comment should be made where rejection of the claim is proposed.

6.8.5 Accounting for Recoupment

On acceptance of the approved Works by the Shire, the cost of the works shall be credited to the DCP account of the Developer.

The balance in this account may be used to offset any cost contribution liabilities owed by the Developer.

Any balance owed to the Developer on completion of all subdivision on land held by the Developer within the Byford DSP area shall be paid to the Developer within 90 days of the condition clearance of the final subdivision in the DSP area subject to:

- (a) there being sufficient funds available in the DCP account; and,
- (b) having regard to the business plan by the Shire for delivery of outstanding DCP works.

7 Examples of Calculation

The following examples are provided to explain the method of calculating the development contribution applicable to a certain development scenario.

7.1 Example 1

A residential subdivision creating 50 additional lots within precinct A.

Precinct	Development contribution rate per lot/dwelling	Number of additional lots/dwellings	Total development contribution
A	\$13,480	50	\$674,000

7.2 Example 2

A residential subdivision creating 100 additional lots within precinct A and providing 1 hectare of public open space.

Precinct	Development contribution rate per lot/dwelling	Number of additional lots/dwellings	Total development contribution
A	\$13,480	100	\$1,348,000
Public open space credit	Amount of public open space and drainage land being provided	Land value per hectare	Credit amount
✓	1ha	Subject to market valuation	market value
		Total net development contribution (contribution minus credit)	\$1,348,000 less market value of 1.0 ha

7.3 Example 3

A commercial development on a 4000m² lot within precinct B.

4500m^2 (lot size) / 450m^2 (average lot size under the R20 residential density code) – one lot

=

9 lots/dwellings (yield calculation for the purposes of determining development contribution for commercial development)

Precinct	Development contribution rate per lot/dwelling	Number of additional lots/dwellings	Total development contribution
B	\$9,319	9	\$83,871

7.4 Example 4

A mixed-use development on an 9000m² lot incorporating seven residential dwellings within precinct C.

In the context of mixed use development, the contribution rate is based upon the subdivision/development potential of the subject site based on a residential density code of R20 or the number of lots/dwellings created, whichever is the greater.

Calculation 1 – Subdivision/development potential of the site based on a residential density code of R20:

$$9000\text{m}^2 \text{ (lot size)} / 450\text{m}^2 \text{ (average minimum lot size under the R20 residential density code)}$$

$$=$$

$$20 \text{ lots/dwellings}$$

Or

Calculation 2 – The number of dwellings created.

$$=$$

$$8 \text{ residential dwellings}$$

The contribution rate will be based upon 19 lots/dwellings being created, as this is the greater of calculations 1 and 2 (minus one lot/dwelling).

Precinct	Development contribution rate per lot/dwelling	Number of additional lots/dwellings	Total development contribution
C	\$3,973	19	\$75,487

7.5 Example 5

A mixed-use development on a 5,000m² lot incorporating seven residential dwellings within precinct A, providing 1000m² of public open space and 150m² for the widening of Orton Road New.

Calculation 1 – Subdivision/development potential of the site based on a residential density code of R20:

$$5000\text{m}^2 \text{ (lot size)} / 450\text{m}^2 \text{ (average lot size under the R20 residential density code)}$$

$$=$$

$$11 \text{ lots/dwellings}$$

Calculation 2 – The number of dwellings created.

$$= 7 \text{ residential dwellings}$$

The contribution rate will be based upon 10 lots/dwellings being created, as this is the greater of calculations 1 and 2 (minus one lot/dwelling)

Byford Traditional Infrastructure Development Contribution Plan Report
December 2013

Precinct	Development contribution rate per lot/dwelling	Number of additional lots/dwellings	Total development contribution
A	\$13,480	10	\$134,800
Public open space credit	Amount of public open space and drainage land being provided	Market value	Credit amount
✓	0.1ha	Valuation amount	Valuation amount
Orton Road New widening land credit	Amount of Orton Road New widening land being provided	Market value	Credit amount
✓	0.015ha	Valuation amount	Valuation amount
		Total net development contribution (contribution minus credit)	\$134,800 less credits
