

Equine Management Plan Guidelines

An Equine Management Plan must demonstrate that a proposal would not result in adverse environmental, health and social impacts.

The Equine management plan should include the following details:

- Number and sizes of horses proposed to be kept on the property;
- How any existing vegetation would be protected;
- Whether the paddocks are or proposed to be irrigated and how pasture cover will be maintained;
- Number of paddocks and size of each paddock;
- Details and size of any stables/shelters and how drainage to prevent nutrient runoff will be managed;
- Details of number of hours per day horses would be off the paddocks/stabled;
- Manure and waste management practices (refer to Health Local Law);
- Dust Management (refer to Health Local Law);
- Measures proposed to protect drains, waterways or wetlands where applicable.
